## PROJ ECTIONS OF STRAIGHT LINES.

INFORMATION REGARDING A LINE means
IT'S LENGTH, POSITION OF IT'S ENDS WITH HP \& VP IT'S INCLINATIONS WITH HP \& VP WILL BE GIVEN.

## SIMPLE CASES OF THE LINE

1. A VERTICAL LINE ( LINE PERPENDICULAR TO HP \& // TO VP)
2. LINE PARALLEL TO BOTH HP \& VP.
3. LINE INCLINED TO HP \& PARALLEL TO VP.
4. LINE INCLINED TO VP \& PARALLEL TO HP.
5. LINE INCLINED TO BOTH HP \& VP.

STUDY ILLUSTRATIONS GIVEN ON NEXT PAGE
 OF LINES LISTED ABOVE AND NOTE RESULTS.

Orthographic Projections Means Fv \& Tv of Line AB are shown below,
with their apparent Inclinations $\alpha \& \beta$

Here TV (ab) is not // to XY line Hence it's corresponding FV
$a^{\prime} b^{\prime}$ is not showing True Length \&
True Inclination with Hp.

Note the procedure
When Fv \& Tv known,
How to find True Length.
(Views are rotated to determine
True Length \& it's inclinations
with Hp \& Vp).

In this sketch, TV is rotated and made // to XY line.
Hence it's corresponding FV $a^{\prime} b_{1}^{\prime}$ Is showing

True Length \&

True Inclination with Hp.

Note the procedure
When True Length is known, How to locate Fv \& Tv.
(Component a-1 of TL is drawn which is further rotated to determine Fv)

Here $a-1$ is component of $T L a b_{1}$ gives length of Fv. Hence it is brought Up to Locus of $a^{\prime}$ and further rotated to get point $b^{\prime}$. $a^{\prime} b^{\prime}$ will be Fv.

Similarly drawing component of other $\operatorname{TL}\left(a^{\prime} b_{1}{ }^{\prime}\right)$ Tv can be drawn.

The most important diagram showing graphical relations among all important parameters of this topic. Study and memorize it as a CIRCUIT DIAGRAM And use in solving various problems.

1) True Length (TL) - $a^{\prime} b_{1}^{\prime} \& a b$
2) Angle of $T L$ with Hp -
3) Angle of TL with $V p-$
4) Angle of FV with $x y$ $\alpha$
5) Angle of TV with $x y$ -

6) LTV (length of FV) - Component (a-1)
7) LFV (length of TV) - Component (a' $\mathrm{a}^{\prime}$ )
8) Position of A- Distances of a \& a' from xy
9) Position of B- Distances of $b \& b^{\prime}$ from $x y$
10) Distance between End Projectors

\& it is further rotated to locate view.
Views are always rotated, made horizontal \& further extendedte

## GROUP (A)

## GENERAL CASES OF THE LINE INCLINED TO BOTH HP \& VP

## PROBLEM 1)

Line $A B$ is 75 mm long and it is $30^{\circ}$ \& $40^{\circ}$ Inclined to $\mathrm{Hp} \& \mathrm{Vp}$ respectively. End A is 12 mm above Hp and 10 mm in front of V p.
Draw projections. Line is in $1^{\text {st }}$ quadrant.

## SOLUTION STEPS:

1) Draw $x y$ line and one projector.
2) Locate a' 12 mm above xy line \& a 10 mm below $x y$ line.
3) Take $30^{\circ}$ angle from a' \& $40^{\circ}$ from a and mark TL I.e. 75 mm on both lines. Name those points $b_{1}{ }^{\prime}$ and $b_{1}$ respectively.
4) Join both points with a' and a resp.
5) Draw horizontal lines (Locus) from both points.
6) Draw horizontal component of TL
a $b_{1}$ from point $b_{1}$ and name it 1 .
( the length a-1 gives length of Fv as we have seen already.)
7) Extend it up to locus of a' and rotating a' as center locate $\mathrm{b}^{\prime}$ as shown. Join $\mathrm{a}^{\prime}$ $b^{\prime}$ as Fv.
8) From b' drop a projector down ward \& get point b. Join a \& b l.e. Tv.
(based on 10 parameters).

## PROBLEM 2:

Line AB 75mm long makes $45^{\circ}$ inclination with Vp while it's Fv makes $55^{\circ}$.
End $A$ is 10 mm above Hp and 15 mm in front of Vp .If line is in $1^{\text {st }}$ quadrant
draw it's projections and find it's inclination with Hp.

## Solution Steps:-

1.Draw x-y line.
2.Draw one projector for $a^{\prime} \& a$
3.Locate $a^{\prime} 10 \mathrm{~mm}$ above $\mathrm{x}-\mathrm{y}$ \&

Tv a 15 mm below xy .
4.Draw a line $45^{\circ}$ inclined to xy from point $a$ and cut TL 75 mm on it and name that point $b_{1}$ Draw locus from point $b_{1}$
5.Take $55^{\circ}$ angle from $a^{\prime}$ for Fv above xy line.
6.Draw a vertical line from $b_{1}$ up to locus of a and name it 1 . It is horizontal component of TL \& is LFV.
7.Continue it to locus of $a^{\prime}$ and rotate upward up to the line of Fv and name it $b^{\prime}$.This $a^{\prime} b^{\prime}$ line is Fv .
8. Drop a projector from $\mathrm{b}^{\prime}$ on locus from point $b_{1}$ and name intersecting point $b$. Line $a b$ is Tv of line AB.
9.Draw locus from $b^{\prime}$ and from $a^{\prime}$ with TL distance cut point $b_{1}{ }^{\prime}$ 10.Join $a^{\prime} b_{1}{ }^{\prime}$ as TL and measure it's angle at $a^{\prime}$.
It will be true angle of line with HP.

## PROBLEM 3:

Fv of
line $A B$ is $50^{\circ}$ inclined to $x y$ and measures 55 mm long while it's Tv is $60^{\circ}$ inclined to $x y$ line. If end $A$ is 10 mm above Hp and 15 mm in front of $V p$, draw it's projections, find TL, inclinations of line with Hp \& Vp.

## SOLUTION STEPS:

1.Draw xy line and one projector.
2. Locate a' 10 mm above xy and
a 15 mm below $x y$ line.
3. Draw locus from these points.
4.Draw $\mathrm{Fv} 50^{\circ}$ to xy from a' and mark b' Cutting 55 mm on it.
5.Similarly draw Tv $60^{\circ}$ to $x y$
from a \& drawing projector from b'
Locate point b and join a b.
6.Then rotating views as shown, locate True Lengths $\mathrm{ab}_{1} \& \mathrm{a}^{\prime} \mathrm{b}_{1}{ }^{\prime}$ and their angles with Hp and V p.

## PROBLEM 4 :-

Line $A B$ is 75 mm long . It's Fv and Tv measure 50 mm \& 60 mm long respectively. End $A$ is 10 mm above Hp and 15 mm in front of V p. Draw projections of line $A B$ if end $B$ is in first quadrant. Find angle with Hp and $V$ p.

## SOLUTION STEPS:

1.Draw xy line and one projector.
2. Locate a' 10 mm above xy and
a 15 mm below $x y$ line.
3.Draw locus from these points.
4.Cut 60 mm distance on locus of a' \& mark $1^{\prime}$ on it as it is LTV.
5.Similarly Similarly cut 50 mm on locus of a and mark point 1 as it is LFV.
6. From 1' draw a vertical line upward and from a' taking TL ( 75 mm ) in compass, mark $b^{\prime}{ }_{1}$ point on it. Join a' b' ${ }_{1}$ points.
7. Draw locus from $b_{1}^{\prime}$
8. With same steps below get $b_{1}$ point and draw also locus from it.
9. Now rotating one of the components I.e. $a-1$ locate $b^{\prime}$ and join $a^{\prime}$ with it to get Fv.
10. Locate tv similarly and measure
Angles
$\theta$ \& $\Phi$

## PROBLEM 5:-

T.V. of a 75 mm long Line CD, measures 50 mm .

End C is in Hp and 50 mm in front of Vp .
End $D$ is 15 mm in front of Vp and it is above Hp .
Draw projections of $C D$ and find angles with Hp and Vp .

SOLUTION STEPS:
1.Draw xy line and one projector.
2. Locate c' on $x y$ and
c 50 mm below xy line.
3. Draw locus from these points.
4.Draw locus of d 15 mm below xy
5.Cut $50 \mathrm{~mm} \& 75 \mathrm{~mm}$ distances on locus of $d$ from $c$ and mark points $d \& d_{1}$ as these are Tv and line CD lengths resp.\& join both with c.
6. From $d_{1}$ draw a vertical line upward up to xy l.e. up to locus of $c^{\prime}$ and draw an arc as shown.
7 Then draw one projector from d to meet this arc in d' point \& join $c^{\prime} d^{\prime}$
8. Draw locus of $\mathrm{d}^{\prime}$ and cut 75 mm on it from c' as TL
9.Measure Angles
$\theta$ \& $\Phi$ $d^{\prime}{ }_{1}$ LOCUS OF $d^{\prime} \& d^{\prime}$

## PROBLEMS INVOLVING TRACES OF THE LINE.

## TRACES OF THE LINE:-

THESE ARE THE POINTS OF INTERSECTIONS OF A LINE ( OR IT'S EXTENSION ) WITH RESPECTIVE REFFERENCE PLANES.

A LINE ITSELF OR IT'S EXTENSION, WHERE EVER TOUCHES H.P., THAT POINT IS CALLED TRACE OF THE LINE ON H.P.( IT IS CALLED H.T.)
V.T.:- It is a point on $V p$.

Hence it is called $F v$ of a point in Vp .
Hence it's Tv comes on XY line.( Here onward named as V )
H.T.:-

It is a point on Hp.
Hence it is called Tv of a point in Hp.
Hence it's FV comes on XY line.( Here onward named as 'h')

## STEPS TO LOCATE HT.

 (WHEN PROJECTIONS ARE GIVEN.)1. Begin with FV. Extend FV up to XY line.
2. Name this point $\mathbf{h}^{\prime}$
( as it is a Wv of a point in Hp )
3. Draw one projector from h'.
4. Now extend Tv to meet this projector. This point is HT

## STEPS TO LOCATE VT. <br> (WHEN PROJECTIONS ARE GIVEN.)

1. Begin with TV. Extend TV up to XY line.
2. Name this point $\mathbf{V}$ ( as it is a Tv of a point in Vp)
3. Draw one projector from v.
4. Now extend Fv to meet this projector. This point is VT

PROBLEM 6 :- Fv of line AB makes $45^{\circ}$ angle with XY line and measures 60 mm .
Line's Tv makes $30^{0}$ with XY line. End A is 15 mm above Hp and it's VT is 10 mm below Hp. Draw projections of line AB,determine inclinations with Hp \& Vp and locate HT, VT.

## SOLUTION STEPS:-

Draw xy line, one projector and locate fv a' 15 mm above xy.
Take $45^{\circ}$ angle from a' and marking 60 mm on it locate point $\mathrm{b}^{\prime}$.
 Draw locus of $\mathrm{VT}, 10 \mathrm{~mm}$ below xy \& extending Fv to this locus locate VT. as fv-h'-vt' lie on one st.line.
Draw projector from vt, locate von xy. From v take $30^{\circ}$ angle downward as Tv and it's inclination can begin with $v$. Draw projector from b' and locate b I.e.Tv point. Now rotating views as usual TL and it's inclinations can be found.
Name extension of Fv , touching xy as $\mathrm{h}^{\prime}$ and below it, on extension of Tv, locate HT.

PROBLEM 7:
One end of line $A B$ is 10 mm above Hp and other end is 100 mm in-front of Vp .
It's Fv is $45^{\circ}$ inclined to xy while it's HT \& VT are 45 mm and 30 mm below xy respectively.
Draw projections and find TL with it's inclinations with Hp \& VP.

SOLUTION STEPS:-
Draw xy line, one projector and locate a' 10 mm above xy.
Draw locus 100 mm below xy for points $\mathrm{b} \& \mathrm{~b}_{1}$
Draw loci for VT and HT, 30 mm \& 45 mm below xy respectively.
Take $45^{\circ}$ angle from a' and extend that line backward to locate $h^{\prime}$ and VT, \& Locate v on xy above VT.
Locate HT below h' as shown.
Then join $v-H T$ - and extend to get top view end $b$.
Draw projector upward and locate b' Make a b \& a'b' dark.

Now as usual rotating views find TL and it's inclinations.
