Revision:00

# **Lecture Plan 1**

Semester:- III Sem Class:- ECS Course Code:- ECS-201-E

<u>Subject:-</u> Data structures <u>Unit:- I</u>

S. No.	<b>Topic :-</b> Introduction, data structures ,classifications, data types,operations,abstract data types, static ,dynamic, examples applications	Time Allotted:-
1.	Introduction Syllabus and Books discussion The logical or mathematical model of a particular organization of data is called a data structure.	15
2	Division of the Topic	
	Introduction, data structures ,classifications, data types,operations,abstract data types, static ,dynamic, examples applications	25
3.	Conclusion	
	So, the choice of data structure depends on certain factors.	
		5
4	Question / Answer	
	<ol> <li>What is data?</li> <li>Why we use a structure for the data?</li> </ol>	
		5

## Assignment to be given:-

Applications of Data structures

Reference Readings:-

Revision:00

# **Lecture Plan 2**

Faculty:- Semester:- III Sem Class:- ECS1, IT Course Code:- ECS-201-E\_\_\_

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 1

S. No.	<b>Topic :-</b> Arrays ,dimension,subscript,defining and declaring arrays, accessing elements, single dimensional arrays	Time Allotted:-
1.	Introduction	
	The simplest type of data structure is a linear array.	15
2	Division of the Topic  Program illustrating the working of array.  Arrays ,dimension,subscript,defining and declaring arrays, accessing elements, single dimensional arrays	
3.	Conclusion	25
	Linear arrays are called one dimensional arrays because each element in such an array Is referenced by one subscript. Advantages and disadvantages of arrays.	5
4	<ol> <li>Question / Answer</li> <li>Types of arrays?</li> <li>Define matrices in terms of arrays.</li> <li>Write a program to sort elements in an array. Make use of function.</li> </ol>	5

## Assignment to be given:-

Write a program in 'c' to merge two sorted arrays.

## Reference Readings:-

Doc. No.: DCE/0/15 Revision :00

# **Lecture Plan 3**

<u>Faculty:-</u> <u>Semester:-</u> <u>III Sem</u> <u>Class:-</u> <u>ECS1, IT</u> <u>Course Code:-</u> <u>ECS-201-E</u>

Subject:- Data structures and algorithms <u>Unit:-1</u>

S. No.	<b>Topic :-</b> Two dimensional arrays and multidimensional arrays, addressing mechanisms and programs	Time Allotted:-
1.	Introduction  A 2D-array is a collection of similar data elements where each element is referenced by two subscript.	5
2	Division of the Topic  Two dimensional arrays and multidimensional arrays, Addressing mechanisms  Illustrating the concept through a program	25
3.	Conclusion  Two dimensional arrays are called matrices and tables in business applications.	5
4	Question / Answer  1. Difference between one dimensional arrays and two dimensional arrays.  2. Applications of 2-d arrays.	15

## Assignment to be given:-

Write a program to find the transpose of a matrix.

## Reference Readings:-

Revision:00

# **Lecture Plan 4**

Faculty:- Semester:- III Sem Class:- ECS1, IT Course Code:- ECS-201-E

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 1

S. No.	<b>Topic :-</b> Concept of structures and unions concepts in C language	Time Allotted:-
1.	Introduction	
	Structure and union are used to store different types of elements collectively.  Declaration of structure and union.( have already learned in previous semester)	5
2	Division of the Topic  Concept of structures and unions concepts in C language  Accessing structure elements using dot operator  Concept of array of structures, nested structures, structure in a union and vice – versa	20
3.	Conclusion	
	Application of structure in creation of file So, structure requires more memory than union.	15
4	Question / Answer  1. Give one example to show the difference between structure and union. 2. Difference of array and structure.	13
		10

#### Assignment to be given:-

Write a program in 'C' to sort array of student structures on basis of their roll no.

#### Reference Readings:-

Revision:00

## Lecture Plan 5

Faculty:- Semester:- III Sem Class:- ECS1, IT Course Code:- ECS-201-E\_\_\_

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 1

S. No.	<b>Topic :-</b> Stacks ,operations, static or array based implementation of stacks and related algorithms	Time Allotted:-
1.	Introduction	
	A stack, also called last-in first-out (LIFO) system, is a linear list in which insertions and deletions can take place only at one end, called the top.  Application of stack.	15
2	Division of the Topic  Stacks ,Push operations, Pop Operation, Top pointer Static or Array based implementation of stacks Infix to Postfix conversion	25
3.	Conclusion  This structure is similar in its operation to a stack of dishes on a spring system.	
	Towers of Hanoi	
4	Question / Answer	5
	<ol> <li>Give some real time example for stack.</li> <li>Limitation of array implementation of stack.</li> </ol>	5

#### Assignment to be given:-

- 1. Write a algorithm to evaluate a postfix expression using stacks/
- 2. Write a program in 'C' to find reverse of a string.

#### Reference Readings:-

Revision:00

# **Lecture Plan 6**

Faculty:- Semester:- III Sem Class:- ECS1, IT Course Code:- ECS-201-E

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 1

S. No.	<b>Topic :-</b> Mathematical expressions, notations and conversions	Time Allotted:-
1.	Introduction	
	Mathematical functions and the notations appear very often in the analysis of algorithm and in computer science.	10
2	Division of the Topic Mathematical expressions, notations and conversions. Floor function Ceiling function Mod function Absolute Function Summation symbol Factorial Function	20
3.	Conclusion	
	Problems were given to be solved.	5
4	Question / Answer	
	1. Define functions:  a. floor  b. ceiling  c. modulo  d. factorial function	15

## Assignment to be given:-

Write a program to find (a) 3  $^{\text{-4}}$  , 4  $^{7/2}$  , 27  $^{\text{-2/3}}$  (b) log\_2 64, log  $_{10}$  0.001

## Reference Readings:-

Doc. No.: DCE/0/15 Revision:00

## **Lecture Plan 7**

<u>Faculty</u>:- <u>Semester</u>:- III Sem <u>Class</u>:- ECS1, IT <u>Course Code</u>:- ECS-201-E

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 2

S. No.	<b>Topic :-</b> Introduction to queues, array implementation of linear queue, basic Operations and circular queues.	Time Allotted:-
1.	Introduction	
	Queue is a linear list of elements in which deletions can take place only at one end, called the front, and insertions take place only at other end, called rear.	15
	Circular queue is a queue which does not has an end. It is circular in nature, its end has been connected to its starting point.	
2	Division of the Topic	
	Introduction to queues Array implementation of linear queue, Concept of front and rear pointers Basic operation – Add and Delete	
		25
3.	Conclusion	
	Discussed the real time applications of queue. Eg. In operating systems it is used in implementation of CPU scheduling queues.	
	Disadvantages of a linear queue.  Advantages of circular queue over linear queue.	5
4	Question / Answer	
	<ol> <li>In computer systems , where queues are used?</li> <li>Write a program to implement a linear queue using functions.</li> </ol>	5

#### Assignment to be given:-

- 1. Difference between queue, deque, priority queue and circular queue.
- 2. Write a program in 'C' to count the total number of elements present at any time in a circular queue.

#### Reference Readings:-

Revision:00

## **Lecture Plan 8**

<u>Faculty:-</u> <u>Semester:-</u> III Sem <u>Class:-</u> ECS1, IT <u>Course Code</u>:- ECS-201-E\_\_\_

Subject:- Data structures and algorithms Unit:- 2

S. No.	<b>Topic :-</b> Static & dynamic data structures, their comparisons, advantages, concept of node as a structure, usage in 'C' language	Time Allotted:-
1.	Introduction	
	Static means fixed and Dynamic implies moving i.e., that keeps changes. Implementation of dynamic structures using Pointers.	15
2	Division of the Topic  Static & dynamic data structures Their comparisons – advantages and disadvantages Concept of a node as a structure Declaration of node in 'C'	25
3.	Conclusion	
	Choice of static or dynamic data structure depends totally upon the requirement of time.	
		5
4	Question / Answer	
	1. Give two examples for both static data structure and dynamic data structure.	
		5

## Assignment to be given:-

Write a program in 'C' to reverse a string using Pointers.

## Reference Readings:-

Revision:00

# **Lecture Plan 9**

<u>Faculty:-</u> <u>Semester:-</u> III Sem <u>Class:-</u> ECS1, IT <u>Course Code:-</u> ECS-201-E

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 2

S. No.	<b>Topic:</b> - Introduction to linked lists, header pointers, nodes, traversals, memory storage and address manipulations.	Time Allotted:-
1.	Introduction	
	A linked list, or a one-way list, is a linear collection of data elements called nodes.  Better than arrays – dynamic data structure.  Applications	15
2	Division of the Topic Introduction to linked lists	
	header pointers ,nodes , Implementation traversals Memory storage and address manipulations	25
3.	Conclusion	
4	Node of linked list can be divided into two parts:  a. First part contains information.  b. Link field or next pointer field.  Insertion, addition are simpler than arrays  Size can grow at run time.  Accessing an element requires traversing the entire linked listhence slow as compared to arrays.  Question / Answer	5
	<ol> <li>How an element is added or deleted to a linked list.</li> <li>write a program in 'C' to merge two sorted linked lists.</li> </ol>	
		5

## Assignment to be given:-

Write a program in 'C' to reverse a linked list.

#### Reference Readings:-

Revision:00

## **Lecture Plan 10**

<u>Faculty</u>:- <u>Semester</u>:- III Sem <u>Class</u>:- ECS1, IT <u>Course Code</u>:- ECS-201-E

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 2

S. No.	<b>Topic :-</b> Proper implementation of linked list- freenode, insertnode, removenode, empty list	Time Allotted:-
1.	Introduction	
	Operations which can be performed on linked list are:  a. traversing a linked list b. searching a linked list c. insertion into a linked list d. deletion from a linked list	15
2	Division of the Topic	
	Operations on linked lists, getnode, freenode, insertnode, removenode, empty list.	
		25
3.	Conclusion	
	For all the operations to be performed on the linked list we have separate algorithm.	
4	Question / Answer	5
	<ol> <li>Write down all algorithms which are meant for performing operations on linked list.</li> <li>Revision on linked list.</li> </ol>	5
	linked list.	

## Assignment to be given:-

Write a program in 'C' to add two polynomials using linked lists.

#### Reference Readings:-

Revision:00

## **Lecture Plan 11**

Faculty:- Semester:- III Sem Class:- ECS1, IT Course Code:- ECS-201-E

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 2

S. No.	Topic:- Linked implementation of stacks	Time Allotted:-
1.	Introduction	
	Using linked list we have implemented the stack. The concept of node was taken for the implementation.	15
2	Division of the Topic	
	Linked implementation of stacks. Concept of top pointer.	
	Push and pop operation.	
	Can grow to any size.	25
3.	Conclusion	
	Stack is last-in first-out so in case of linked representations all the memory blocks are linked using the concept of links.	
	Comparison of static stack and dynamic stack.	5
4	Question / Answer	
	1. Write a program in 'C' to reverse a linked list using stack.	
		5

#### Assignment to be given:-

Revise

Reference Readings:-

Revision:00

# **Lecture Plan 12**

Faculty:- Semester:- III Sem Class:- ECS1, IT Course Code:- ECS-201-E

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 2

Topic :- Linked implementation of queues Circular linked lists and operations	Time Allotted:-
Introduction	
Using linked list we have implemented the queue. Queue is a data structure having first-in first-out format.	15
A circular linked list is a list where last node points back to the first node.	
Division of the Topic	
Linked implementation of queues. Circular linked lists and operations	
	25
Conclusion	
The nodes in a queue are linked same as linked list in case of linked implementation of queues.	
Circular linked list, we use where we want continuity.	5
Question / Answer	
<ol> <li>Give one example to show the use of linked implementation of queue.</li> <li>How is a circular queue different from circular linked list?</li> </ol>	5
	Circular linked lists and operations  Introduction  Using linked list we have implemented the queue. Queue is a data structure having first-in first-out format.  A circular linked list is a list where last node points back to the first node.  Division of the Topic  Linked implementation of queues.  Circular linked lists and operations  Conclusion  The nodes in a queue are linked same as linked list in case of linked implementation of queues.  Circular linked list, we use where we want continuity.  Question / Answer  1. Give one example to show the use of linked implementation of queue.

## Assignment to be given:-

Write an algorithm to implement circular queue.

# **Lecture Plan 13**

Faculty:- Semester:- III Sem Class:- ECS1, IT Course Code:- ECS-201-E

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 2

S. No.	Topic:- Doubly linked lists and operations	Time Allotted:-
1.	Introduction	
	A doubly linked list is a linear collection of data elements, called nodes, where each node is divided into three parts: a. information field b. forward pointer c. backward pointer	15
2	Division of the Topic	
	Doubly linked lists and operations.	
		25
3.	Conclusion	
	Doubly linked list is used where we have to move in both directions- forward and backward.  Insertion and deletion is simpler compared to linear linked list.  More memory is required for the extra pointer	5
4	Question / Answer	
	1. Write down algorithm for doubly linked list.	5

## Assignment to be given:-

Nil

### Reference Readings:-

<u>Faculty</u>:- <u>Semester</u>:- III Sem <u>Class</u>:- <u>ECS</u>1, IT <u>Course Code</u>:- ECS-201-E

Subject:- Data structures and algorithms Unit:- 2

S. No.	<b>Topic :-</b> Dequeues and priority queues, applications	Time Allotted:-
1.	Introduction	
	A deque is a linear list in which elements can be added or removed at either end but not in the middle.	15
2	Division of the Topic	
	Dequeues and priority queues Applications	
		25
3.	Conclusion	
	A priority queue is a collection of elements such that each element has been assigned a priority and such that the order in which elements are deleted and processed comes from certain rules.	
		5
4	Question / Answer	
	1. Give any two applications of deque and priority queue.	5

### Assignment to be given:-

Nil

<u>Faculty:-</u> <u>Semester:-</u> III Sem <u>Class:-</u> ECS1, IT <u>Course Code</u>:- ECS-201-E\_

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 3

S. No.	<b>Topic :-</b> Trees , basic terminology and definitions , Binary trees, representations , binary tree traversals	Time Allotted:-
1.	Introduction	
	Tree is a nonlinear data structure. So far, we have studied all linear data structure like strings, arrays, lists, stacks and queues.	15
	<ul> <li>A binary tree T is defined as a finite set of elements, called nodes, such that</li> <li>a) T is empty.</li> <li>b) T contained a distinguished node R, called the root of T, &amp; the remaining nodes of T form an ordered pair of disjoint binary trees T1 &amp; T2.</li> </ul>	
2	Division of the Topic	
	Trees Basic terminology and definitions Binary trees, representations, binary tree traversals	25
3.	Conclusion	
	Tree is a nonlinear data structure having left child and right child.  The binary tree is used since it can be maintained easily in the computer.	5
4	Question / Answer  1. Define tree with example. Also mention various types of trees. 2. Difference between tree and a binary tree.	5

## Assignment to be given:-

Write a program in in-order traversal using iterative method.

Write the no. of times a number occurs in the tree.

### Reference Readings:-

# **Lecture Plan 16**

<u>Faculty:-</u> <u>Semester:-</u> III Sem <u>Class:-</u> ECS1, IT <u>Course Code</u>:- ECS-201-E\_

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 3

S. No.	<b>Topic :-</b> Tree traversal algorithms ,preorder traversal using stacks	Time Allotted:-
1.	Introduction	
	Tree can be traversed in three ways:  1. Preorder  2. Inorder  3. Preorder	15
2	Division of the Topic	
	Tree traversal algorithms, preorder traversal using stacks. Continuation of previous lecture.	
		25
3.	Conclusion	
	We can also call three algorithm as node-left-right (NLR) traversal, the left-node-right (LNR) traversal and the left-right-node (LRN) traversal.	
		5
4	Question / Answer	
	1. Write down the whole procedure step by step for tree traversing.	5

## Assignment to be given:-

Nil

#### Reference Readings:-

<u>Subject:-</u> Data structures and algorithms <u>Unit</u>:- 4

S. No.	<b>Topic :-</b> Representation of graphs, matrix, list ,path matrix ,transitive closure BFS algorithm  DFS algorithm	Time Allotted:-
1.	Introduction	
	A graph G consists of two things: a. nodes b. edges	15
	The general idea behind a breadth-first search beginning at a starting node A is as follows. First we examine the starting node A. then we examine all the neighbors of A. Then we examine all the neighbors of the neighbors of A.	
	The general idea behind a depth-first search beginning at a starting node A is as follows. First we examine the starting node A. Then we examine all the nodes N along a path P which begins at A; that is, we process a neighbor of A, then a neighbor of a neighbor of A, & so on. After coming to a dead end, we backtrack on P until we can continue along path P1.	25
2	Division of the Topic	
	Representation of graphs, matrix, list ,path matrix ,transitive closure. BFS algorithm DFS algorithm	
3.	Conclusion	
	A graph can be used to solve many problems which we face in our daily life. The breadth first search uses a queue as an auxiliary structure to hold nodes for future processing.	5
4	Question / Answer	_
	<ol> <li>How many types of graphs are there?</li> <li>What are the other options available for traversing a graph.</li> </ol>	5

### Assignment to be given:-

Write an algorithm for Breadth First Search an Depth first Search.

	23,1,78,-12,44,99,100,1,54,21,2	

## Assignment to be given:-

Write a short note on shell sort algorithm

Reference Readings:-

Revision:00

# **Lecture Plan 29**

<u>Faculty:-</u> <u>Semester:-</u> III Sem <u>Class:-</u> ECS1, IT <u>Course Code</u>:- ECS-201-E

Subject:- Data structures and algorithms Unit:- 6

S. No.	Topic:- Merge sort and analysis, Quicksort and analysis	Time Allotted:-
1.	Introduction	
	Illustrating the working of Mergesort and Quicksort through examples.	15
2	Division of the Topic	
	Merge sort and analysis Quicksort and analysis	
		25
3.	Conclusion	
	Quicksort is most fastest and efficient sorting algorithm. It is also stable.	
		5
4	Question / Answer	
	Compare Mergesort and Quicksort.	5

## Assignment to be given:-

Nil

Reference Readings:-

Revision:00

## **Lecture Plan 30**

Faculty:- Semester:- III Sem Class:- ECS1, IT Course Code:- ECS-201-E

Subject:- Data structures and algorithms Unit:- 6

S. No.	Topic :- Heapsort and analysis	Time Allotted:-
1.	Introduction	
	Illustrating the working of Heapsort.	15
2	Division of the Topic	
	Heapsort and analysis.	
		25
3.	Conclusion	
	Heapsort is a way to sort elements in an efficient manner.	
		5
4	Question / Answer	
	1. Write down algorithm for Heapsort.	5

#### Assignment to be given:-

Write down time and space complexity for Heapsort.

## Reference Readings:-
