# Control Principles

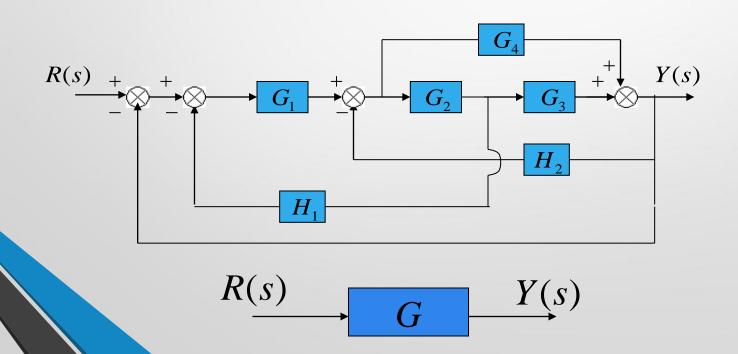

Block diagram practice

# Block diagram

**Transfer Function** 

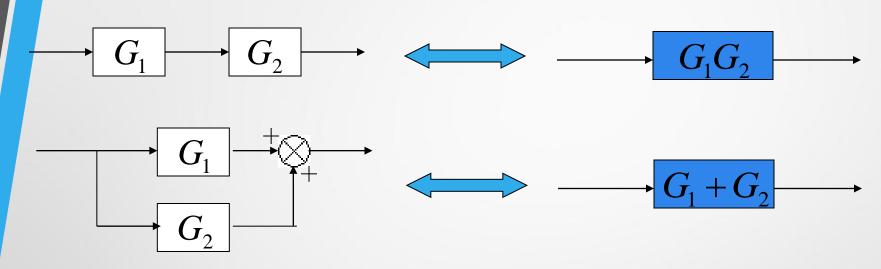

**Consists of Blocks** 

Can be reduced

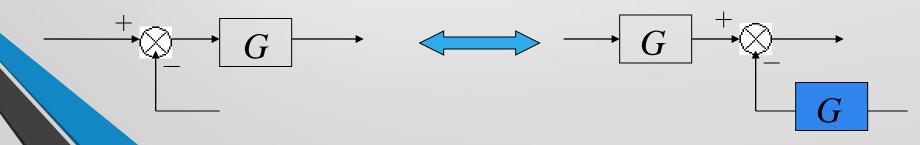

## Reduction techniques

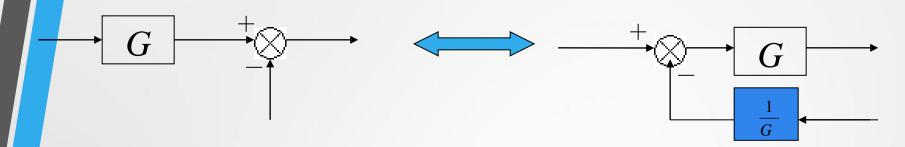

1. Combining blocks in cascade or in parallel

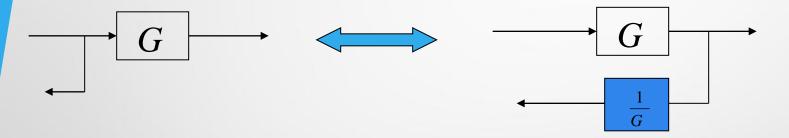

2. Moving a summing point behind a block

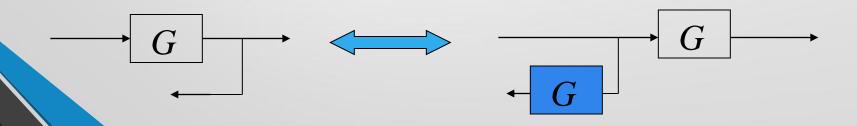

## 3. Moving a summing point ahead of a block

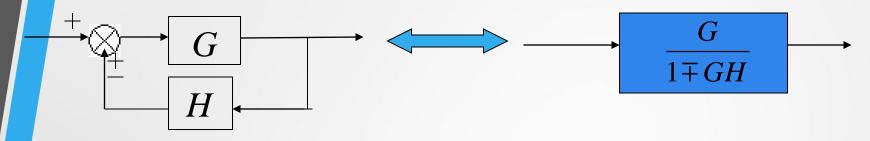

4. Moving a pickoff point behind a block

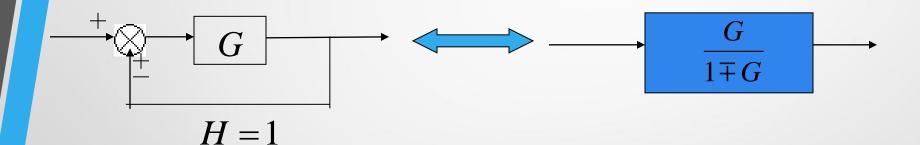

5. Moving a pickoff point ahead of a block

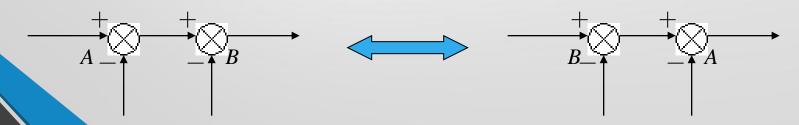

## 6. Eliminating a feedback loop

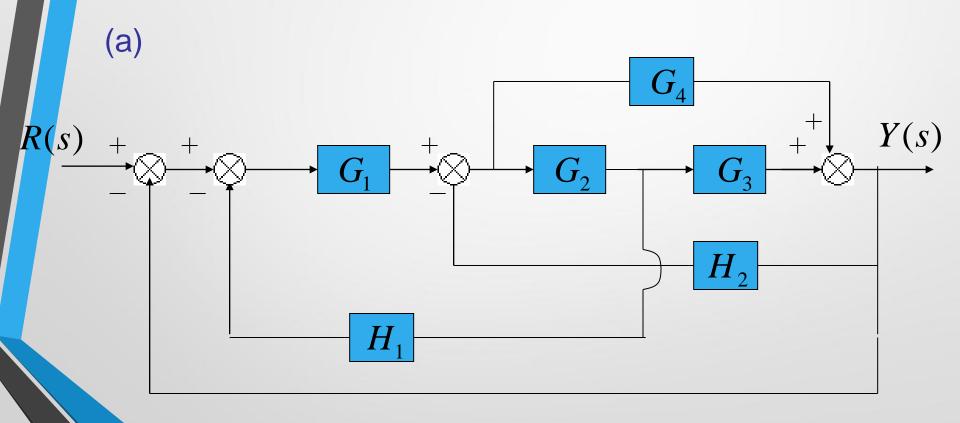

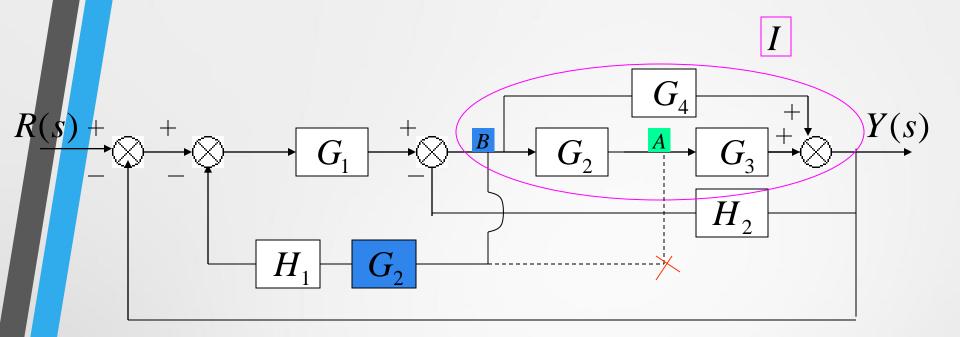

## 7. Swap with two neighboring summing points

# Example 1

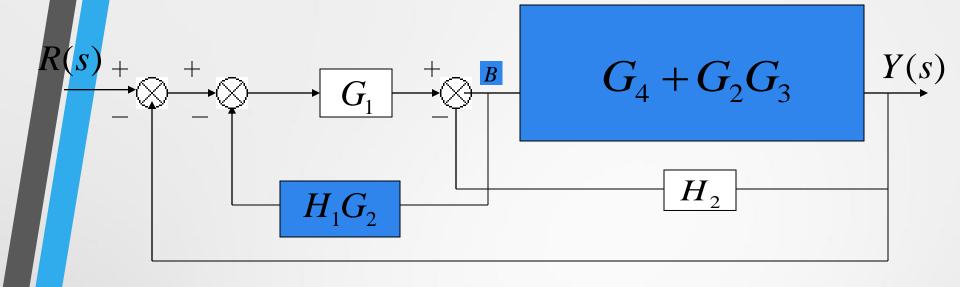

Find the transfer function of the following block diagrams

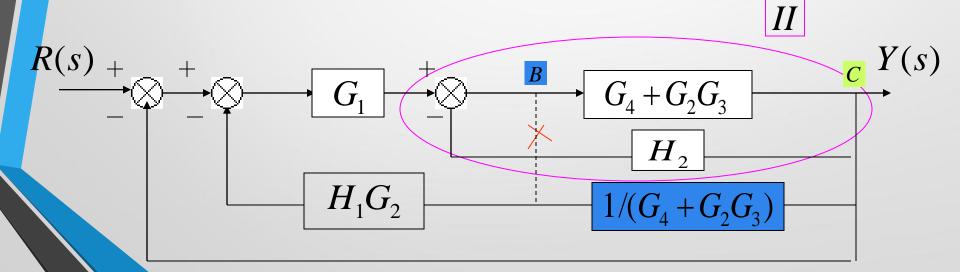

- 1. Moving pickoff point A ahead of block  $G_2$
- 2. Eliminate loop I & simplify

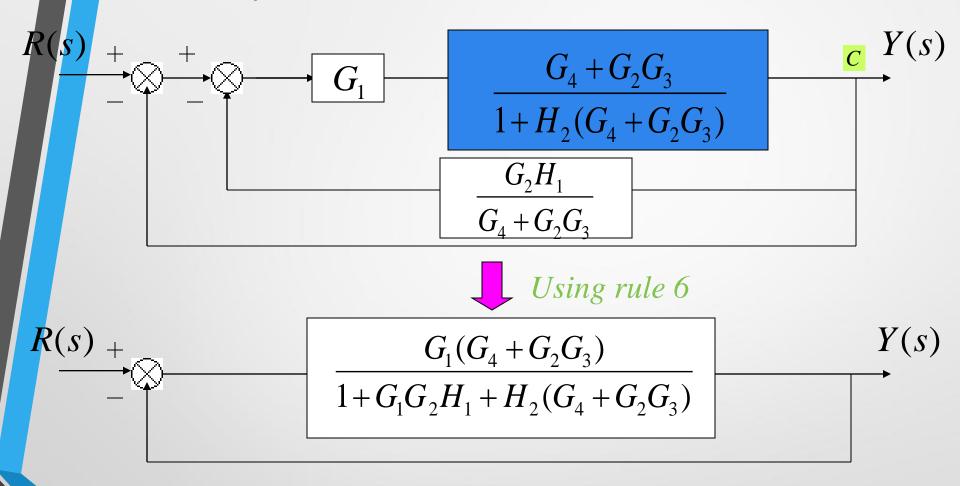

$$G_4 + G_2G_3$$

3. Moving pickoff point B behind block  $G_4 + G_2G_3$ 

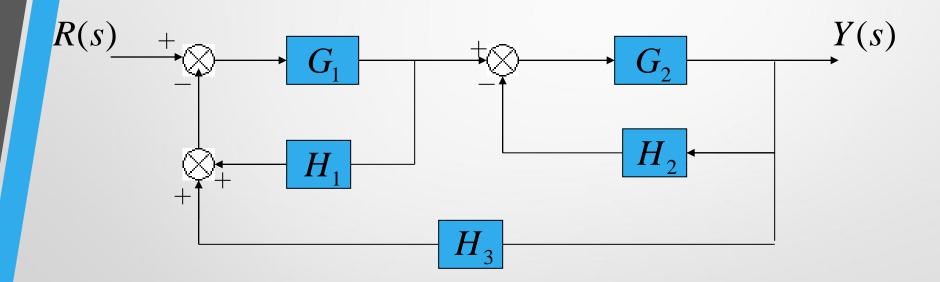

#### Eliminate loop III

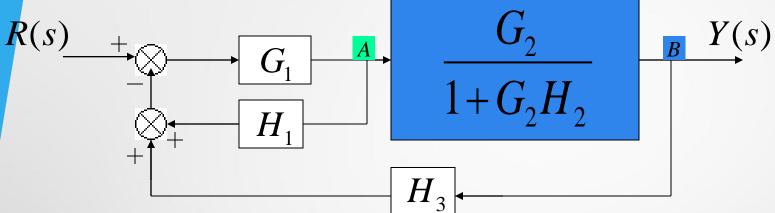

$$T(s) = \frac{Y(s)}{R(s)} = \frac{G_1(G_4 + G_2G_3)}{1 + G_1G_2H_1 + H_2(G_4 + G_2G_3) + G_1(G_4 + G_2G_3)}$$

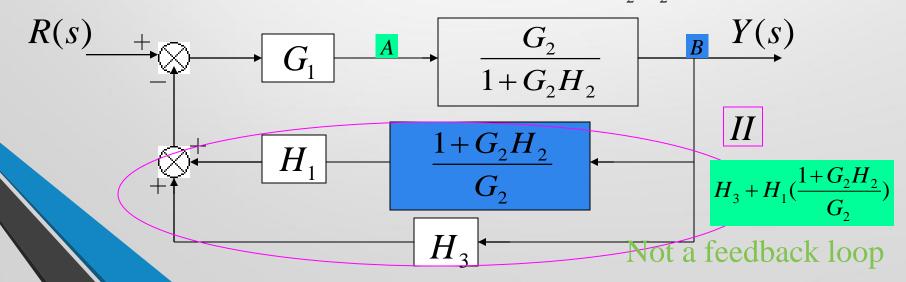

(b)

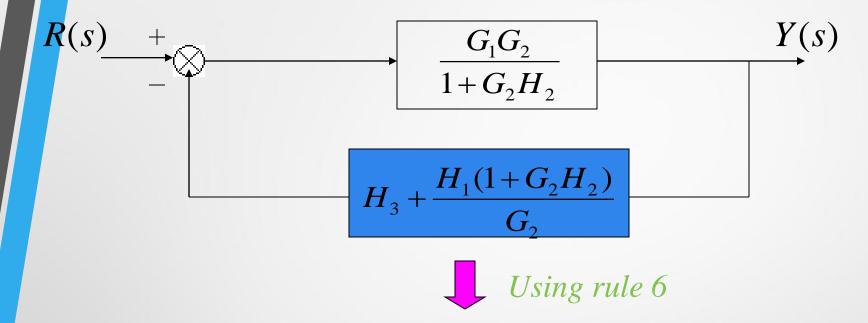

## . Eliminate loop I

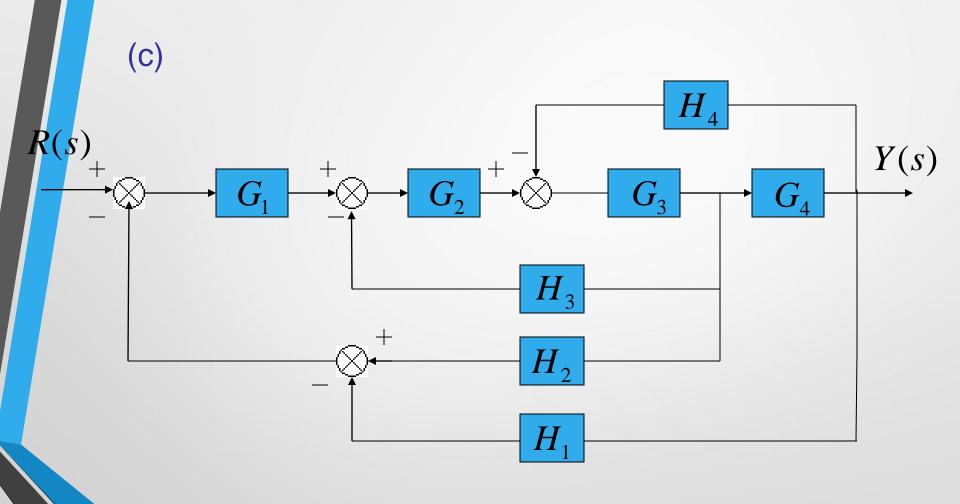

2. Moving pickoff point A behind block  $\frac{G_2}{1+G_2H_2}$ 

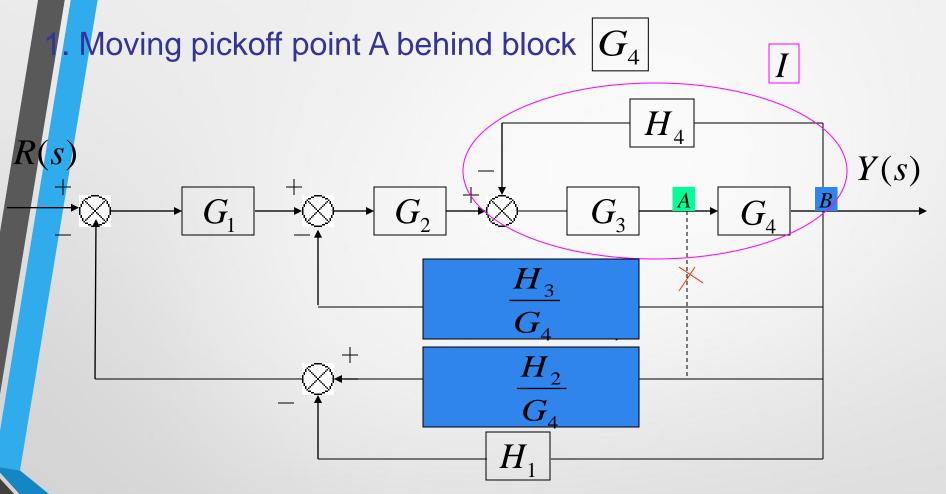

## Eliminate loop II

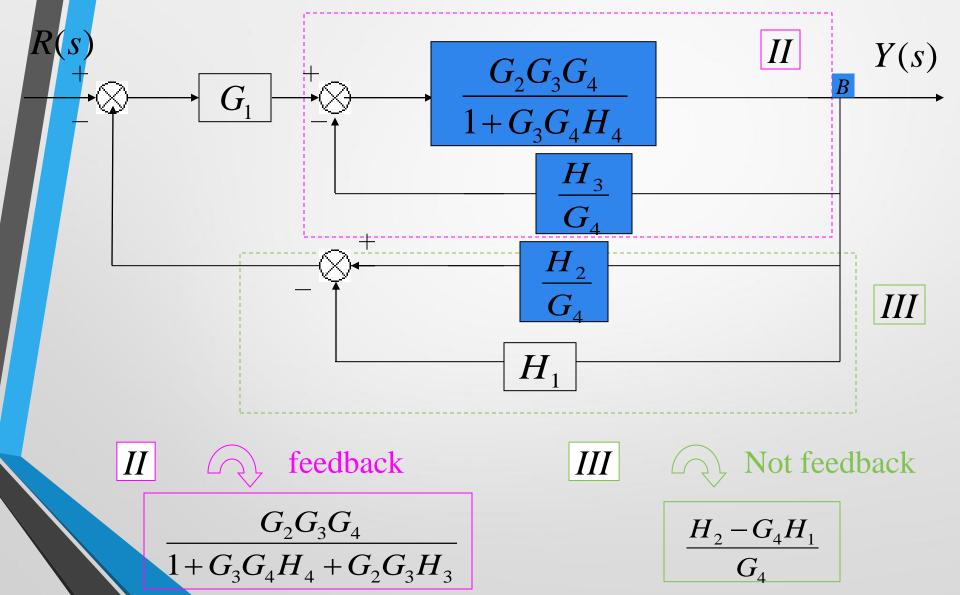

$$T(s) = \frac{Y(s)}{R(s)} = \frac{G_1 G_2}{1 + G_2 H_2 + G_1 G_2 H_3 + G_1 H_1 + G_1 G_2 H_1 H_2}$$

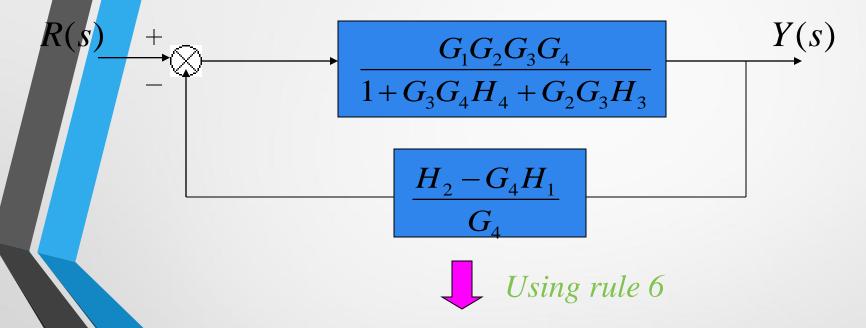

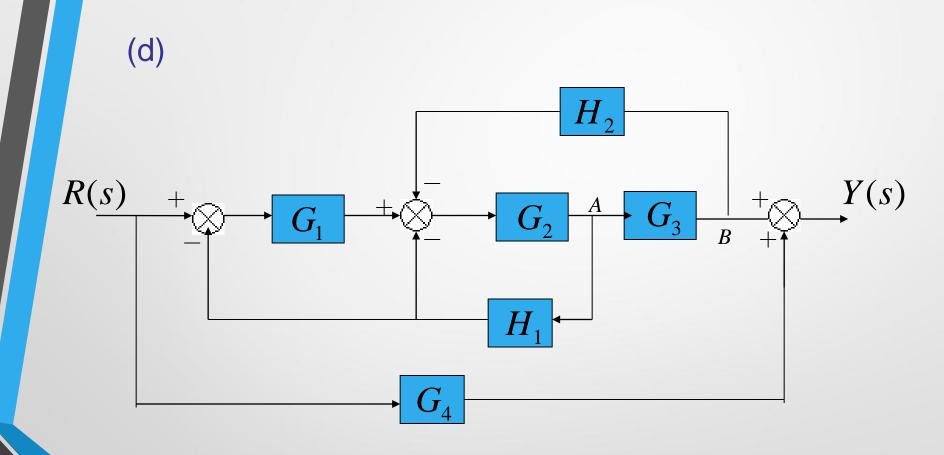

## Eliminate loop I and Simplify

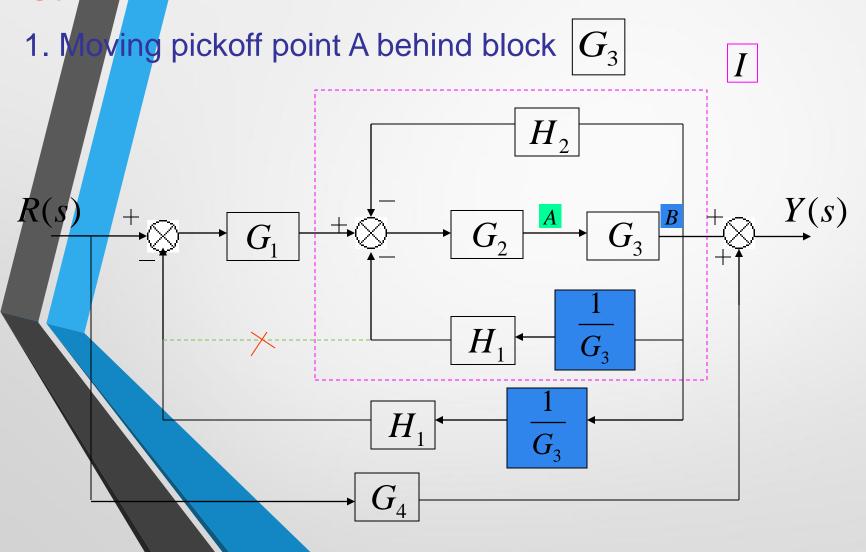

## 3. Elmnate loop II & IIII

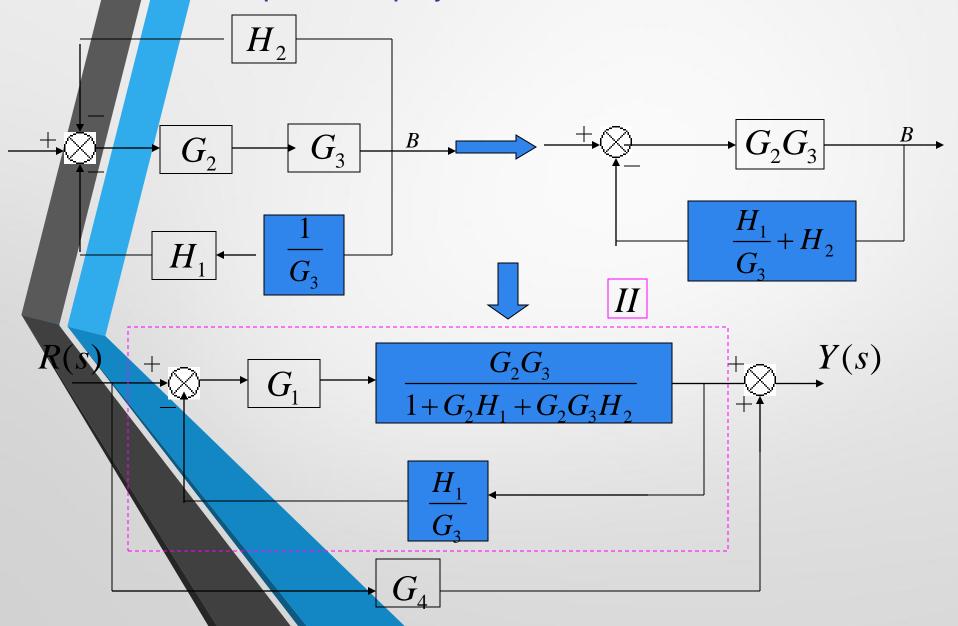

$$T(s) = \frac{Y(s)}{R(s)} = \frac{G_1 G_2 G_3 G_4}{1 + G_2 G_3 H_3 + G_3 G_4 H_4 + G_1 G_2 G_3 H_2 - G_1 G_2 G_3 G_4 H_1}$$

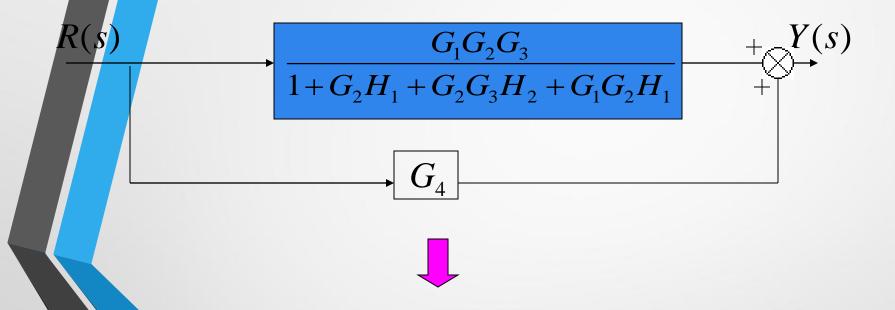

## 2. Elminate loop I & Simplify

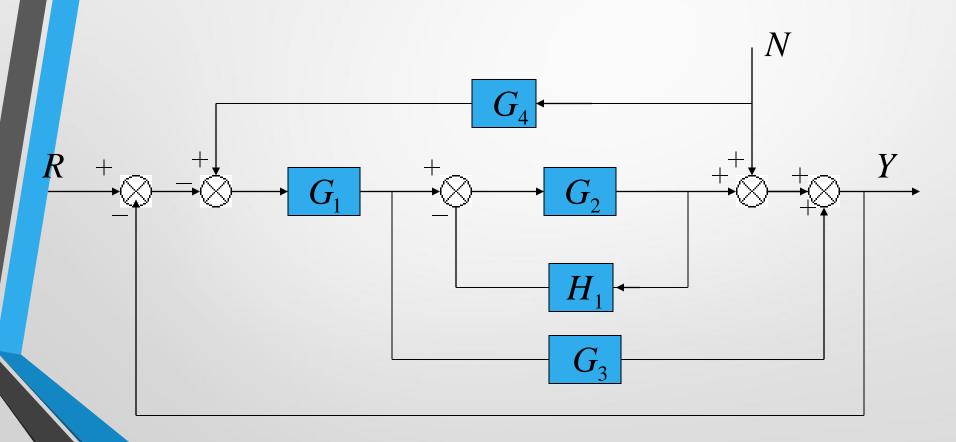

## 3. Elmnate loop II

$$T(s) = \frac{Y(s)}{R(s)} = G_4 + \frac{G_1 G_2 G_3}{1 + G_2 H_1 + G_2 G_3 H_2 + G_1 G_2 H_1}$$

# Example 2

Determine the effect of R and N on Y in the following diagram

In this linear system, the output Y contains two parts, one part is related to R and the other is caused by N:

$$Y = Y_1 + Y_2 = T_1 R + T_2 N$$

If we set N=0, then we can get Y1:

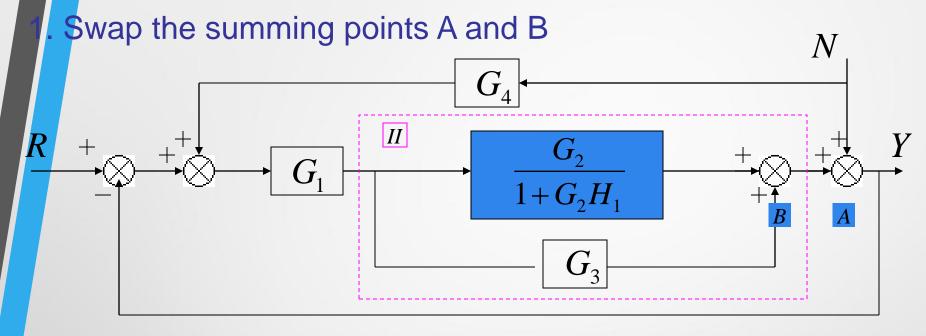

$$Y_1 = Y_{N=0} = T_1 R$$

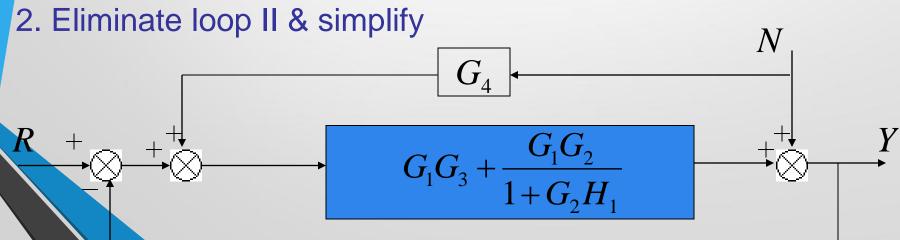

The same, we set R=0 and Y2 is also obtained:

$$Y_2 = Y_{R=0} = T_2 N$$

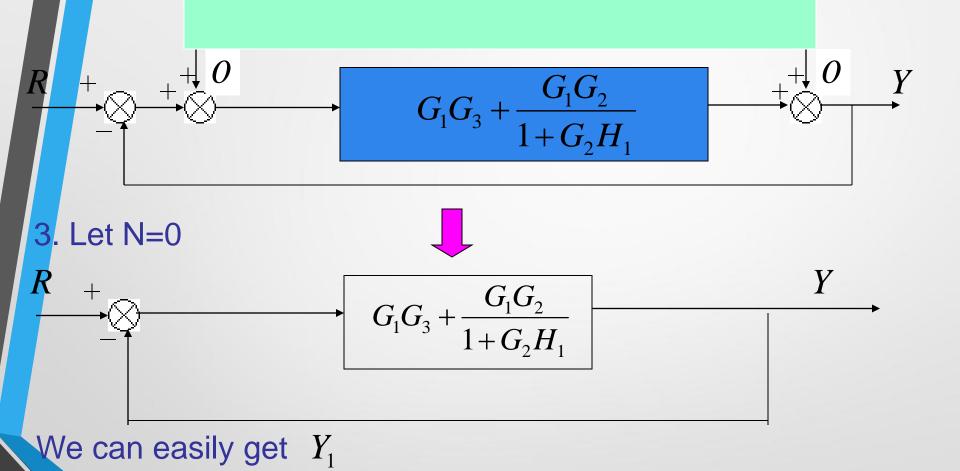

Thus, the output Y is given as follows:

$$Y = Y_1 + Y_2 = Y_{N=0} + Y_{R=0}$$

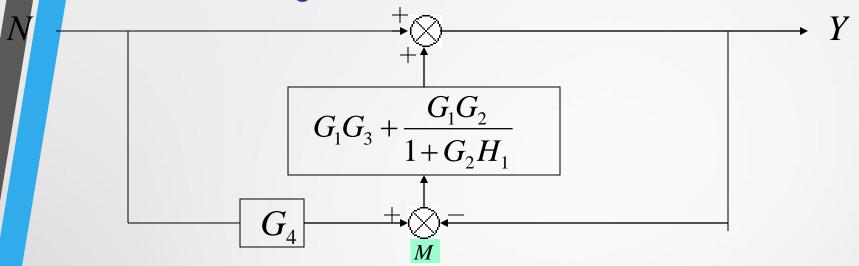

#### Fewrite the diagram:

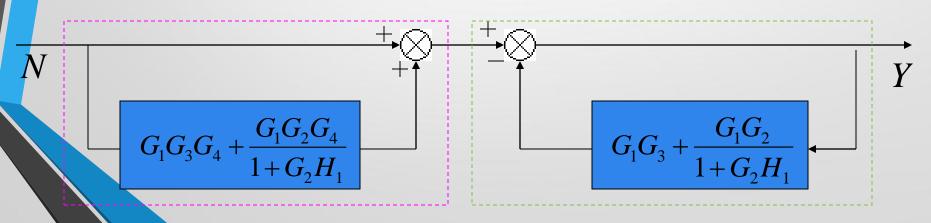

$$Y_1 = \frac{G_1G_2 + G_1G_3 + G_1G_2G_3H_1}{1 + G_2H_1 + G_1G_2 + G_1G_3 + G_1G_2G_3H_1}R$$

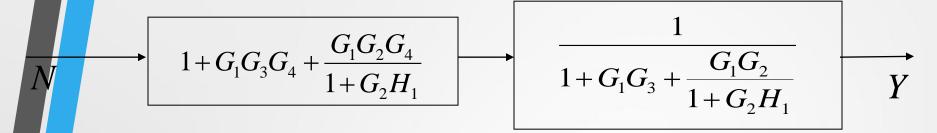

#### 5. Break down the summing point M:

#### Eliminate above loops:

$$Y_2 = \frac{1 + G_2 H_1 + G_1 G_2 G_4 + G_1 G_3 G_4 + G_1 G_2 G_3 G_4 H_1}{1 + G_2 H_1 + G_1 G_2 + G_1 G_3 + G_1 G_2 G_3 H_1} N$$

7. According to the principle of superposition,  $Y_1$  and  $Y_2$  can be combined together, So:

$$Y = Y_1 + Y_2$$

$$= \frac{1}{1 + G_2 H_1 + G_1 G_2 + G_1 G_3 + G_1 G_2 G_3 H_1} [(G_1 G_2 + G_1 G_3 + G_1 G_2 G_3 H_1)R$$

$$+ (1 + G_2 H_1 + G_1 G_2 G_4 + G_1 G_3 G_4 + G_1 G_2 G_3 G_4 H_1)N]$$
