

Fast Fourier Transform (FFT)

(Theory and Implementation)

Learning Objectives

- ◆ **DFT algorithm.**
- ◆ **Conversion of DFT to FFT algorithm.**
- ◆ **Implementation of the FFT algorithm.**

DFT Algorithm

- ◆ The Fourier transform of an analogue signal $x(t)$ is given by:

$$X(\omega) = \int_{-\infty}^{+\infty} x(t) e^{-j\omega t} dt$$

- ◆ The Discrete Fourier Transform (DFT) of a discrete-time signal $x(nT)$ is given by:

$$X(k) = \sum_{n=0}^{N-1} x[n] e^{-j\frac{2\pi}{N}nk}$$

- ◆ Where:

$$k = 0, 1, \dots, N-1$$

$$x(nT) = x[n]$$

DFT Algorithm

◆ If we let:

$$e^{-j\frac{2\pi}{N}} = W_N$$

then:

$$X(k) = \sum_{n=0}^{N-1} x[n] W_N^{nk}$$

DFT Algorithm

$$X(k) = \sum_{n=0}^{N-1} x[n] W_N^{nk}$$

$x[n]$ = input

$X[k]$ = frequency bins

W = twiddle factors

$$X(0) = x[0]W_N^0 + x[1]W_N^{0*1} + \dots + x[N-1]W_N^{0*(N-1)}$$

$$X(1) = x[0]W_N^0 + x[1]W_N^{1*1} + \dots + x[N-1]W_N^{1*(N-1)}$$

⋮

$$X(k) = x[0]W_N^0 + x[1]W_N^{k*1} + \dots + x[N-1]W_N^{k*(N-1)}$$

⋮

$$X(N-1) = x[0]W_N^0 + x[1]W_N^{(N-1)*1} + \dots + x[N-1]W_N^{(N-1)(N-1)}$$

Note: For N samples of x we have N frequencies representing the signal.

Performance of the DFT Algorithm

- ◆ **The DFT requires N^2 ($N \times N$) complex multiplications:**
 - ◆ Each $X(k)$ requires N complex multiplications.
 - ◆ Therefore to evaluate all the values of the DFT ($X(0)$ to $X(N-1)$) N^2 multiplications are required.
- ◆ **The DFT also requires $(N-1) \times N$ complex additions:**
 - ◆ Each $X(k)$ requires $N-1$ additions.
 - ◆ Therefore to evaluate all the values of the DFT $(N-1) \times N$ additions are required.

Performance of the DFT Algorithm

- ◆ Can the number of computations required be reduced?

DFT → FFT

- ◆ **A large amount of work has been devoted to reducing the computation time of a DFT.**
- ◆ **This has led to efficient algorithms which are known as the Fast Fourier Transform (FFT) algorithms.**

DFT \rightarrow FFT

$$X(k) = \sum_{n=0}^{N-1} x[n] W_N^{nk}; \quad 0 \leq k \leq N-1 \quad [1]$$

$$\mathbf{x}[n] = \mathbf{x}[0], \mathbf{x}[1], \dots, \mathbf{x}[N-1]$$

- ◆ Lets divide the sequence $\mathbf{x}[n]$ into even and odd sequences:
 - ◆ $\mathbf{x}[2n] = \mathbf{x}[0], \mathbf{x}[2], \dots, \mathbf{x}[N-2]$
 - ◆ $\mathbf{x}[2n+1] = \mathbf{x}[1], \mathbf{x}[3], \dots, \mathbf{x}[N-1]$

DFT → FFT

- ◆ Equation 1 can be rewritten as:

$$X(k) = \sum_{n=0}^{\frac{N}{2}-1} x[2n]W_N^{2nk} + \sum_{n=0}^{\frac{N}{2}-1} x[2n+1]W_N^{(2n+1)k} \quad [2]$$

- ◆ Since:

$$\begin{aligned} W_N^{2nk} &= e^{-j\frac{2\pi}{N}2nk} = e^{-j\frac{2\pi}{N/2}nk} \\ &= W_{\frac{N}{2}}^{nk} \end{aligned}$$

$$W_N^{(2n+1)k} = W_N^k \cdot W_{\frac{N}{2}}^{nk}$$

- ◆ Then:

$$\begin{aligned} X(k) &= \sum_{n=0}^{\frac{N}{2}-1} x[2n]W_{\frac{N}{2}}^{nk} + W_N^k \sum_{n=0}^{\frac{N}{2}-1} x[2n+1]W_{\frac{N}{2}}^{nk} \\ &= Y(k) + W_N^k Z(k) \end{aligned}$$

DFT \rightarrow FFT

- ◆ The result is that an N-point DFT can be divided into two N/2 point DFT's:

$$X(k) = \sum_{n=0}^{N-1} x[n] W_N^{nk}; \quad 0 \leq k \leq N-1$$

N-point DFT

- ◆ Where Y(k) and Z(k) are the two N/2 point DFTs operating on even and odd samples respectively:

$$\begin{aligned} X(k) &= \sum_{n=0}^{\frac{N}{2}-1} x_1[n] W_N^{nk} + W_N^k \sum_{n=0}^{\frac{N}{2}-1} x_2[n] W_N^{nk} \\ &= Y(k) + W_N^k Z(k) \end{aligned}$$

Two N/2-point DFTs

DFT → FFT

- ◆ **Periodicity** and **symmetry** of W can be exploited to simplify the DFT further:

$$\begin{aligned}
 X(k) &= \sum_{n=0}^{\frac{N}{2}-1} x_1[n] W_{\frac{N}{2}}^{nk} + W_N^k \sum_{n=0}^{\frac{N}{2}-1} x_2[n] W_{\frac{N}{2}}^{nk} \\
 &\vdots \\
 X\left(k + \frac{N}{2}\right) &= \sum_{n=0}^{\frac{N}{2}-1} x_1[n] W_{\frac{N}{2}}^{n\left(k + \frac{N}{2}\right)} + W_N^{k + \frac{N}{2}} \sum_{n=0}^{\frac{N}{2}-1} x_2[n] W_{\frac{N}{2}}^{n\left(k + \frac{N}{2}\right)}
 \end{aligned} \tag{3}$$

Or: $W_N^{k + \frac{N}{2}} = e^{-j\frac{2\pi}{N}k} e^{-j\frac{2\pi}{N}\frac{N}{2}} = e^{-j\frac{2\pi}{N}k} e^{-j\pi} = -e^{-j\frac{2\pi}{N}k} = -W_N^k$: **Symmetry**

And: $W_{\frac{N}{2}}^{k + \frac{N}{2}} = e^{-j\frac{2\pi}{N/2}k} e^{-j\frac{2\pi}{N/2}\frac{N}{2}} = e^{-j\frac{2\pi}{N/2}k} = W_{\frac{N}{2}}^k$: **Periodicity**

DFT \rightarrow FFT

◆ Symmetry and periodicity:

$$W_N^{k+N/2} = -W_N^k$$
$$W_{N/2}^{k+N/2} = W_{N/2}^k$$
$$W_8^{k+4} = -W_8^k$$
$$W_8^{k+8} = W_8^k$$

DFT \rightarrow FFT

- ◆ Finally by exploiting the symmetry and periodicity, Equation 3 can be written as:

$$\begin{aligned} X\left(k + \frac{N}{2}\right) &= \sum_{n=0}^{\frac{N}{2}-1} x_1[n] W_{\frac{N}{2}}^{nk} - W_N^k \sum_{n=0}^{\frac{N}{2}-1} x_2[n] W_{\frac{N}{2}}^{nk} \\ &= Y(k) - W_N^k Z(k) \end{aligned} \quad [4]$$

DFT \rightarrow FFT

$$X(k) = Y(k) + W_N^k Z(k); \quad k = 0, \dots, \left(\frac{N}{2} - 1\right)$$
$$X\left(k + \frac{N}{2}\right) = Y(k) - W_N^k Z(k); \quad k = 0, \dots, \left(\frac{N}{2} - 1\right)$$

- ◆ **$Y(k)$ and $W_N^k Z(k)$ only need to be calculated once and used for both equations.**
- ◆ **Note: the calculation is reduced from 0 to N-1 to 0 to (N/2 - 1).**

DFT \rightarrow FFT

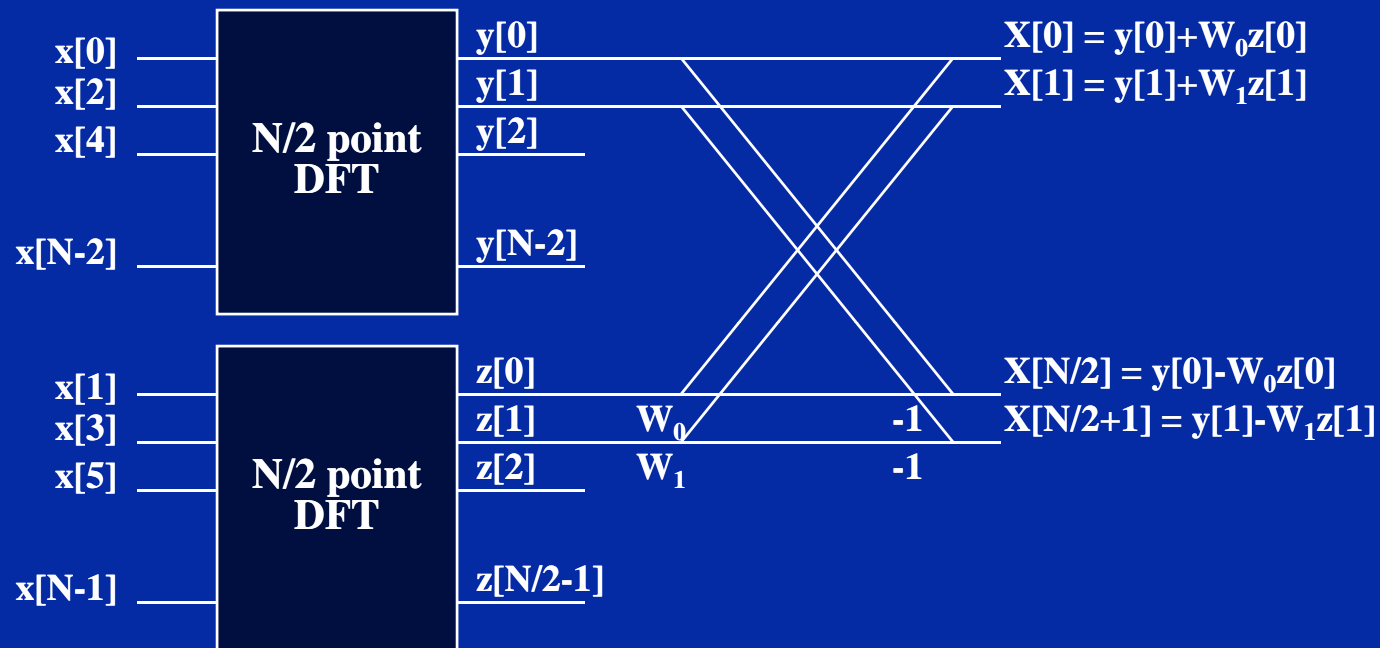

$$X(k) = Y(k) + W_N^k Z(k); \quad k = 0, \dots, \left(\frac{N}{2} - 1\right)$$
$$X\left(k + \frac{N}{2}\right) = Y(k) - W_N^k Z(k); \quad k = 0, \dots, \left(\frac{N}{2} - 1\right)$$

- ◆ **Y(k) and Z(k) can also be divided into N/4 point DFTs using the same process shown above:**

$$Y(k) = U(k) + W_{\frac{N}{2}}^k V(k) \qquad Z(k) = P(k) + W_{\frac{N}{2}}^k Q(k)$$
$$Y\left(k + \frac{N}{4}\right) = U(k) - W_{\frac{N}{2}}^k V(k) \qquad Z\left(k + \frac{N}{4}\right) = P(k) - W_{\frac{N}{2}}^k Q(k)$$

- ◆ **The process continues until we reach 2 point DFTs.**

DFT → FFT

- ◆ Illustration of the first decimation in time FFT.

FFT Implementation

- ◆ Calculation of the output of a ‘butterfly’:

Key: U = Upper r = real
L = Lower i = imaginary

- ◆ Different methods are available for calculating the outputs U' and L'.
- ◆ The best method is the one with the least number of multiplications and additions.

FFT Implementation

- ◆ Calculation of the output of a ‘butterfly’:

$$(L_r + jL_i)(W_r + jW_i) = L_r W_r + jL_r W_i + jL_i W_r - L_i W_i$$

$$\begin{aligned} U' &= [(L_r W_r - L_i W_i) + j(L_r W_i + L_i W_r)] + [U_r + jU_i] \\ &= (L_r W_r - L_i W_i + U_r) + j(L_r W_i + L_i W_r + U_i) \end{aligned}$$

$$\begin{aligned} L' &= (U_r + jU_i) - [(L_r W_r - L_i W_i) + j(L_r W_i + L_i W_r)] \\ &= (U_r - L_r W_r + L_i W_i) + j(U_i - L_r W_i - L_i W_r) \end{aligned}$$

FFT Implementation

- ◆ Calculation of the output of a ‘butterfly’:

- ◆ To further minimise the number of operations (* and +), the following are calculated only once:

$\text{temp1} = L_r W_r$	$\text{temp2} = L_i W_i$	$\text{temp3} = L_r W_i$	$\text{temp4} = L_i W_r$
$\text{temp1_2} = \text{temp1} - \text{temp2}$		$\text{temp3_4} = \text{temp3} + \text{temp4}$	

$U_r' = \text{temp1} - \text{temp2} + U_r$	$= \text{temp1_2} + U_r$
$U_i' = \text{temp3} + \text{temp4} + U_i$	$= \text{temp3_4} + U_i$
$L_r' = U_r - \text{temp1} + \text{temp2}$	$= U_r - \text{temp1_2}$
$L_i' = U_i - \text{temp3} - \text{temp4}$	$= U_i - \text{temp3_4}$

FFT Implementation (Butterfly Calculation)

- ◆ Converting the butterfly calculation into 'C' code:

```
temp1 = (y[lower].real * WR);  
temp2 = (y[lower].imag * WI);  
temp3 = (y[lower].real * WI);  
temp4 = (y[lower].imag * WR);  
  
temp1_2 = temp1 - temp2;  
temp3_4 = temp3 + temp4;  
  
y[upper].real = temp1_2 + y[upper].real;  
y[upper].imag = temp3_4 + y[upper].imag;  
y[lower].imag = y[upper].imag - temp3_4;  
y[lower].real = y[upper].real - temp1_2;
```

FFT Implementation

- ◆ To efficiently implement the FFT algorithm a few observations are made:
 - ◆ Each stage has the same number of butterflies (number of butterflies = $N/2$, N is number of points).
 - ◆ The number of DFT groups per stage is equal to $(N/2^{\text{stage}})$.
 - ◆ The difference between the upper and lower leg is equal to $2^{\text{stage}-1}$.
 - ◆ The number of butterflies in the group is equal to $2^{\text{stage}-1}$.

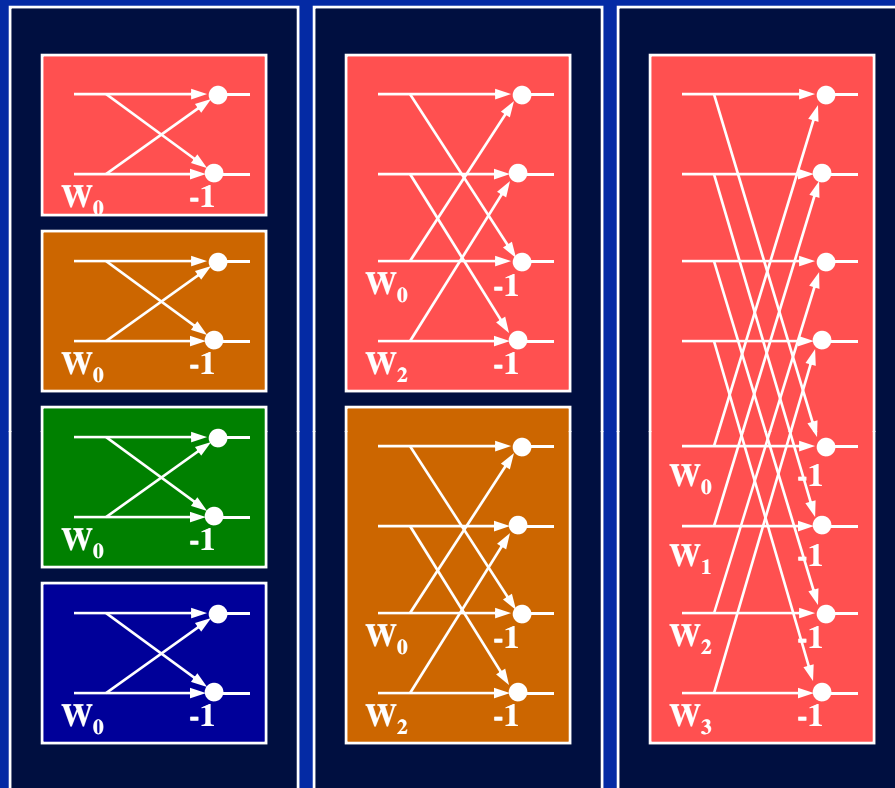

FFT Implementation

Example: 8 point FFT

- ◆ **Decimation in time FFT:**
 - ◆ Number of stages = $\log_2 N$
 - ◆ Number of blocks/stage = $N/2^{\text{stage}}$
 - ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT
(1) Number of stages:

- ◆ Decimation in time FFT:
 - ◆ Number of stages = $\log_2 N$
 - ◆ Number of blocks/stage = $N/2^{\text{stage}}$
 - ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Stage 1

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 1$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$
- ◆ Number of blocks/stage = $N/2^{\text{stage}}$
- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Stage 1

Stage 2

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 2$

- ◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Stage 1

Stage 2

Stage 3

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Stage 1

Stage 2

Stage 3

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ **Stage 1:**

- ◆ **Decimation in time FFT:**

- ◆ Number of stages = $\log_2 N$

- ◆ **Number of blocks/stage = $N/2^{\text{stage}}$**

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ **Stage 1: $N_{\text{blocks}} = 1$**

◆ **Decimation in time FFT:**

- ◆ Number of stages = $\log_2 N$

- ◆ **Number of blocks/stage = $N/2^{\text{stage}}$**

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ **Stage 1:** $N_{\text{blocks}} = 2$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ **Number of blocks/stage = $N/2^{\text{stage}}$**

- ◆ **Number of butterflies/block = $2^{\text{stage}-1}$**

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ **Stage 1: $N_{\text{blocks}} = 3$**

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ **Number of blocks/stage = $N/2^{\text{stage}}$**

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ **Stage 1:** $N_{\text{blocks}} = 4$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ **Number of blocks/stage = $N/2^{\text{stage}}$**

- ◆ **Number of butterflies/block = $2^{\text{stage}-1}$**

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 1$

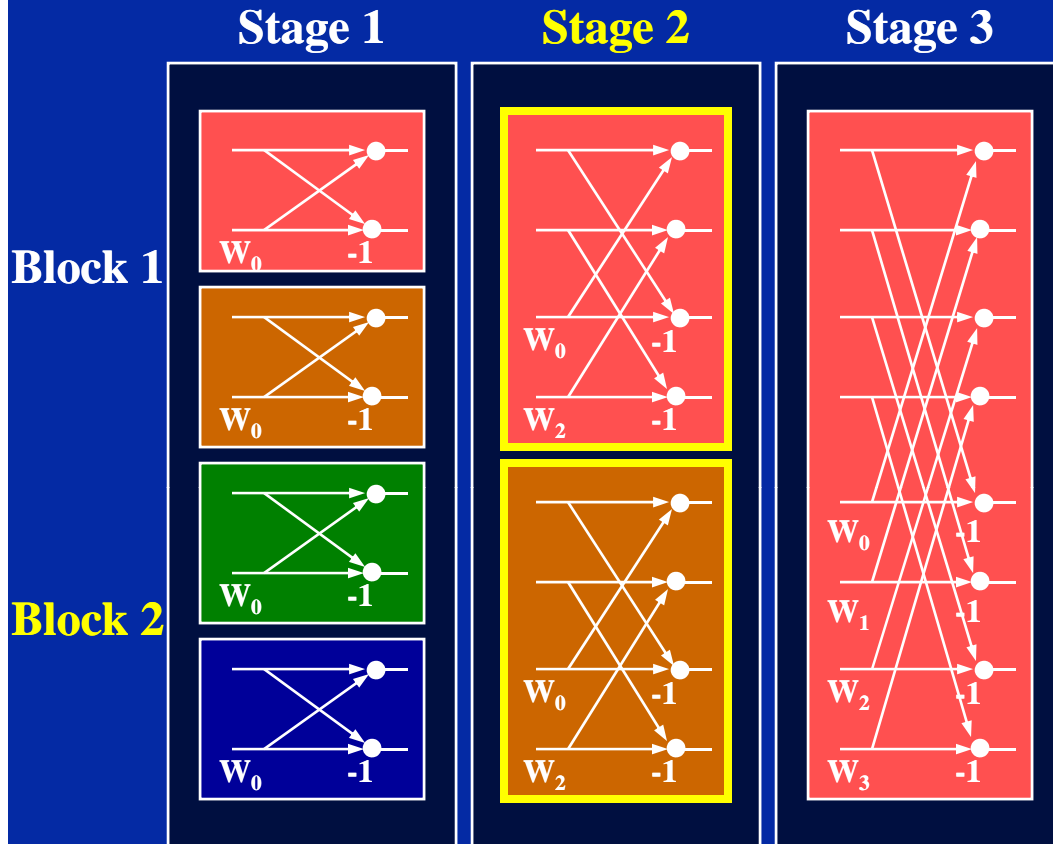

◆ **Decimation in time FFT:**

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Stage 1

Stage 2

Stage 3

Block 1

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

(3) B'flies/block:

- ◆ Stage 1:

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

(3) B'flies/block:

- ◆ Stage 1: $N_{\text{btf}} = 1$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

(3) B'flies/block:

- ◆ Stage 1: $N_{\text{btf}} = 1$

- ◆ Stage 2: $N_{\text{btf}} = 1$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

(3) B'flies/block:

- ◆ Stage 1: $N_{\text{btf}} = 1$

- ◆ Stage 2: $N_{\text{btf}} = 2$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

(3) B'flies/block:

- ◆ Stage 1: $N_{\text{btf}} = 1$

- ◆ Stage 2: $N_{\text{btf}} = 2$

- ◆ Stage 3: $N_{\text{btf}} = 1$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

(3) B'flies/block:

- ◆ Stage 1: $N_{\text{btf}} = 1$

- ◆ Stage 2: $N_{\text{btf}} = 2$

- ◆ Stage 3: $N_{\text{btf}} = 2$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

(3) B'flies/block:

- ◆ Stage 1: $N_{\text{btf}} = 1$

- ◆ Stage 2: $N_{\text{btf}} = 2$

- ◆ Stage 3: $N_{\text{btf}} = 3$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

Example: 8 point FFT

(1) Number of stages:

- ◆ $N_{\text{stages}} = 3$

(2) Blocks/stage:

- ◆ Stage 1: $N_{\text{blocks}} = 4$

- ◆ Stage 2: $N_{\text{blocks}} = 2$

- ◆ Stage 3: $N_{\text{blocks}} = 1$

(3) B'flies/block:

- ◆ Stage 1: $N_{\text{btf}} = 1$

- ◆ Stage 2: $N_{\text{btf}} = 2$

- ◆ Stage 3: $N_{\text{btf}} = 4$

◆ Decimation in time FFT:

- ◆ Number of stages = $\log_2 N$

- ◆ Number of blocks/stage = $N/2^{\text{stage}}$

- ◆ Number of butterflies/block = $2^{\text{stage}-1}$

FFT Implementation

- ◆ The most important aspect of converting the FFT diagram to 'C' code is to calculate the upper and lower indices of each butterfly:

```
GS = N/4;          /* Group step initial value */
step = 1;          /* Initial value */
NB = N/2;          /* NB is a constant */

for (k=N; k>1; k>>1) /* Repeat this loop for each stage */
{
    for (j=0; j<N; j+=GS) /* Repeat this loop for each block */
    {
        for (n=j; n<(j+GS-1); n+=step) /* Repeat this loop for each butterfly */
        {
            upperindex = n;
            lowerindex = n+step;
        }
    }
    /* Change the GS and step for the next stage */

    GS = GS << 1;
    step = step << 1;
}
```

FFT Implementation

◆ How to declare and access twiddle factors:

(1) How to declare the twiddle factors:

```
struct {  
    short real; // 32767 * cos (2*pi*n) -> Q15 format  
    short imag; // 32767 * sin (2*pi*n) -> Q15 format  
} w[] = { 32767,0,  
         32767,-201,  
         ...  
};
```

(2) How to access the twiddle factors:

```
short temp_real, temp_imag;  
  
temp_real = w[i].real;  
temp_imag = w[i].imag;
```
