EXAMPLE TWO

Minimize $w = x_5 + x_6$

$$-z + x_1 + 2x_2 + 3x_3 - x_4 = 0$$

subject to

$$x_1 + 2x_2 - x_3 + x_4 = 10$$

$$x_1, x_2, x_3, x_4 \geq 0, x_5 \geq 0, x_6 \geq 0$$

Artificial variables X_5 & X_6 are added to the first two constraints to serve as initial basic variables.

column... let's choose
column 5.

Minimum Ratio Test:

$$\min \left\{ \frac{5}{5.5}, \frac{-10}{1.5} \right\}$$

The minimum ratio

In this tableau, one of the artificial variables remains basic (and positive).

This indicates that the original LP had no feasible solution, since a feasible solution (with artificial variables zero) would be optimal for Phase One, if such a solution exists!

EXAMPLE TWO

Maximize $z = x_1 + 2x_2 + 3x_3 - x_4$
subject to

$$\begin{array}{rcl} x_1 + 2x_2 + 3x_3 & = 15 \\ 2x_1 + x_2 + 5x_3 & = 20 \\ x_1 + 2x_2 - x_3 + x_4 & = 10 \\ x_1, x_2, x_3, x_4 \geq 0 \end{array}$$

$-z$ & X_4 can serve as basic variables in the first and last rows.

	0	1	2	3	0	15
	0	2	1	5	0	20

This tableau is optimal for Phase One.

Now we proceed to Phase Two, in which we optimize the original objective, starting from the basic feasible solution which we have just found in Phase One.

EXAMPLE THREE

	2	3	4	5	6		B	B
	0	0	0	0	0	-1	1	0
	0	1	0	0	0	-1	0	-15
	0	0	0	1	-0.25	0.5	0	1.25

	0	0	1	0	0.08333	0.833	-0.3333	2.917

We can now delete the artificial variables (and w) and can delete the Phase-One objective row.

EXAMPLE THREE

Since the Phase Two objective is to be minimized, this tableau is optimal!

Minimize $z = 34x_1 + 5x_2 + 19x_3 + 9x_4$
subject to

$$\begin{aligned}2x_1 + x_2 + x_3 + x_4 &\geq 9 \\4x_1 - 2x_2 + 5x_3 + x_4 &\leq 8 \\4x_1 - x_2 + 3x_3 + x_4 &\geq 5 \\x_1, x_2, x_3, x_4 &\geq 0\end{aligned}$$

Convert the inequalities to equations by adding slack & subtracting surplus variables

Minimize $z = 34x_1 + 5x_2 + 19x_3 + 9x_4$
subject to

$$\begin{aligned}2x_1 + x_2 + x_3 + x_4 - x_5 &= 9 \\4x_1 - 2x_2 + 5x_3 + x_4 + x_6 &= 8 \\4x_1 - x_2 + 3x_3 + x_4 - x_7 &= 5 \\x_1, x_2, x_3, x_4, x_5, x_6, x_7 &\geq 0\end{aligned}$$

EXAMPLE FOUR

Minimize $z = 34x_1 + 5x_2 + 19x_3 + 9x_4$

subject to

$$2x_1 + x_2 + x_3 + x_4 - x_5 = 9$$

$$4x_1 - 2x_2 + 5x_3 + x_4 + x_6 = 8$$

$$4x_1 - x_2 + 3x_3 + x_4 - x_7 = 5$$

$$x_1, x_2, x_3, x_4, x_5, x_6, x_7 \geq 0$$

The first and last constraint require artificial variables:

Minimize $w = x_8 + x_9$

$$-z + 34x_1 + 5x_2 + 19x_3 + 9x_4 = 0$$

subject to

$$2x_1 + x_2 + x_3 + x_4 - x_5 + x_8 = 9$$

$$4x_1 - 2x_2 + 5x_3 + x_4 + x_6 = 8$$

$$4x_1 - x_2 + 3x_3 + x_4 - x_7 + x_9 = 5$$

$$x_1, x_2, x_3, x_4, x_5, x_6, x_7, x_8, x_9 \geq 0$$

EXAMPLE FOUR

Minimize $w = x_8 + x_9$

$$-z + 34x_1 + 5x_2 + 19x_3 + 9x_4 = 0$$

subject to

$$2x_1 + x_2 + x_3 + x_4 - x_5 + x_8 = 9$$

$$4x_1 - 2x_2 + 5x_3 + x_4 + x_6 = 8$$

$$4x_1 - x_2 + 3x_3 + x_4 - x_7 + x_9 = 5$$

$$x_1, x_2, x_3, x_4, x_5, x_6, x_7, x_8, x_9 \geq 0$$

This tableau is optimal for Phase One.

We may now delete the artificial variables and the Phase One objective row to obtain a basic feasible solution with which to begin Phase Two.
