

# Simplex Algorithm: Pivoting in the Tableau

Maximize  $12X_1 + 8X_2$   
subject to  $5X_1 + 2X_2 \leq 150$   
 $2X_1 + 3X_2 \leq 100$   
 $4X_1 + 2X_2 \leq 80$   
 $X_1 \geq 0, X_2 \geq 0$

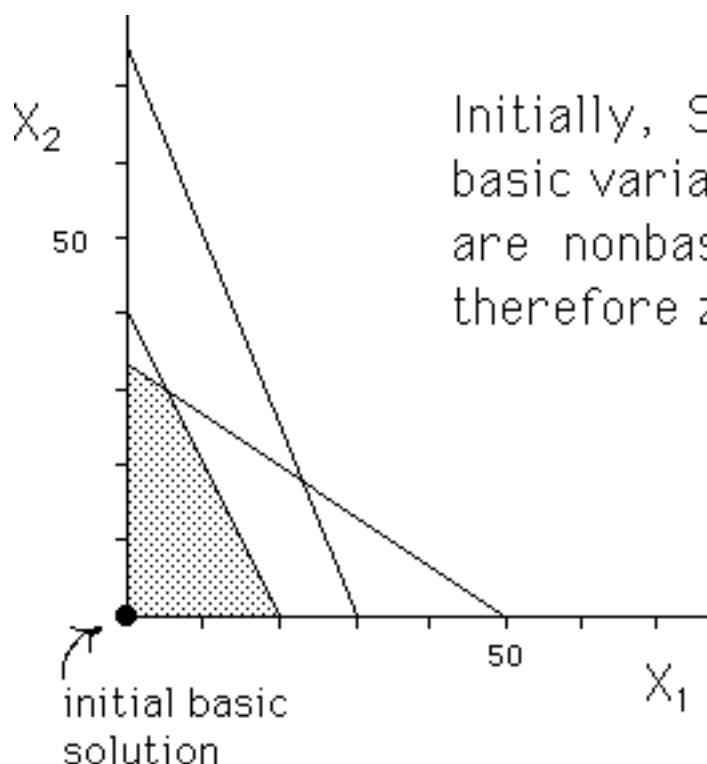

*Inequalities are converted to equations by the introduction of slack variables.*

Maximize  $12X_1 + 8X_2 = Z$   
subject to  $5X_1 + 2X_2 + S_1 = 150$   
 $2X_1 + 3X_2 + S_2 = 100$   
 $4X_1 + 2X_2 + S_3 = 80$   
 $X_1 \geq 0, X_2 \geq 0, S_1 \geq 0, S_2 \geq 0, S_3 \geq 0$

|            |  |       |
|------------|--|-------|
| Maximize   | $12X_1 + 8X_2$   | = Z   |
| subject to | $5X_1 + 2X_2 + S_1$  | = 150 |
|            | $2X_1 + 3X_2 + S_2$  | = 100 |
|            | $4X_1 + 2X_2 + S_3$  | = 80  |
|            | $X_1 \geq 0, X_2 \geq 0, S_1 \geq 0, S_2 \geq 0, S_3 \geq 0$ |       |

Tableau

| -Z | $X_1$ | $X_2$ | $S_1$ | $S_2$ | $S_3$ | rhs |
|----|-------|-------|-------|-------|-------|-----|
| 1  | 12    | 8     | 0     | 0     | 0     | 0   |
| 0  | 5     | 2     | 1     | 0     | 0     | 150 |
| 0  | 2     | 3     | 0     | 1     | 0     | 100 |
| 0  | 4     | 2     | 0     | 0     | 1     | 80  |

Initially,  $S_1$ ,  $S_2$ , &  $S_3$  are basic variables, while  $X_1$  &  $X_2$  are nonbasic variables (and therefore zero!)

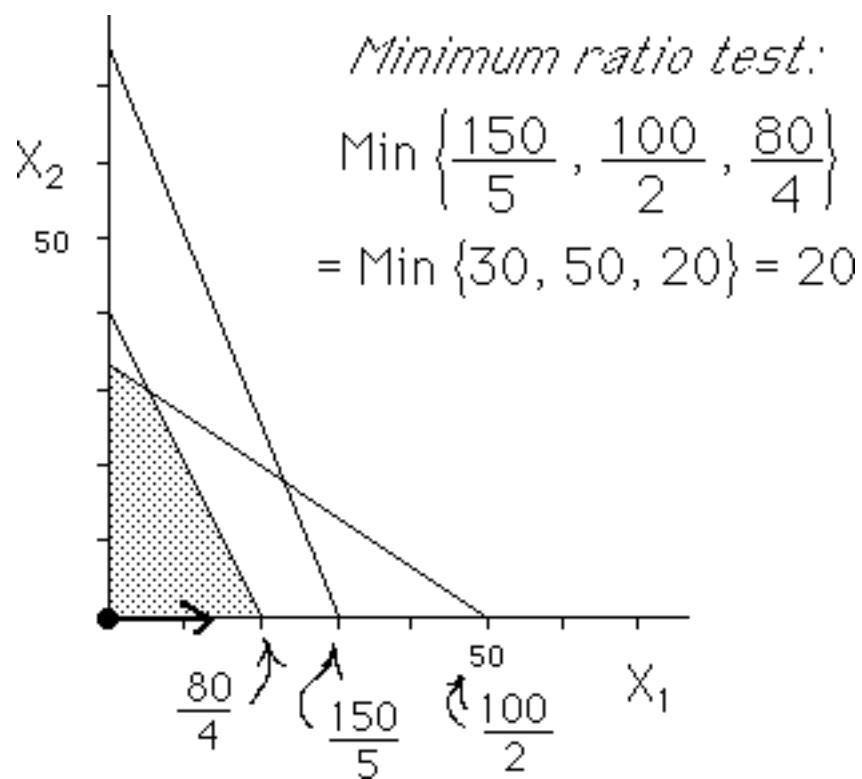

Increasing either  $X_1$  or  $X_2$  will increase the objective function. Let's choose  $X_1$ .

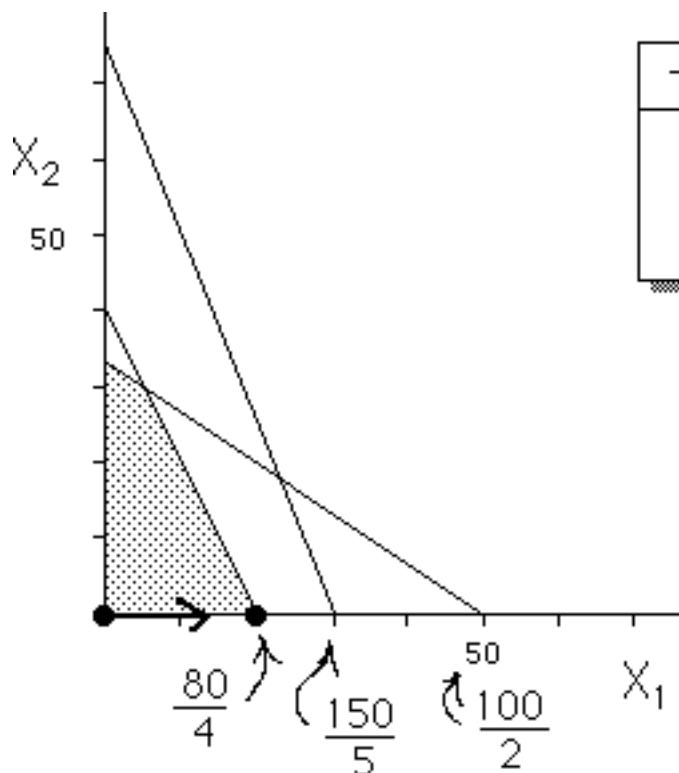

Minimum ratio test:

$$\text{Min} \left\{ \frac{150}{5}, \frac{100}{2}, \frac{80}{4} \right\}$$

$$= \text{Min} \{30, 50, 20\} = 20$$

| -Z | $X_1$ | $X_2$ | $S_1$ | $S_2$ | $S_3$ | rhs |
|----|-------|-------|-------|-------|-------|-----|
| 1  | 12    | 8     | 0     | 0     | 0     | 0   |
| 0  | 5     | 2     | 1     | 0     | 0     | 150 |
| 0  | 2     | 3     | 0     | 1     | 0     | 100 |
| 0  | 4     | 2     | 0     | 0     | 1     | 80  |

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | S <sub>3</sub> | rhs  |
|----|----------------|----------------|----------------|----------------|----------------|------|
| 1  | 0              | 2              | 0              | 0              | -3             | -240 |
| 0  | 0              | -0.5           | 1              | 0              | -1.25          | 50   |
| 0  | 0              | 2              | 0              | 1              | -0.5           | 60   |
| 0  | 1              | 0.5            | 0              | 0              | 0.25           | 20   |

Pivoting has taken us from one "corner" to an adjacent "corner"

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | S <sub>3</sub> | rhs  |
|----|----------------|----------------|----------------|----------------|----------------|------|
| 1  | 0              | 2              | 0              | 0              | -3             | -240 |
| 0  | 0              | -0.5           | 1              | 0              | -1.25          | 50   |
| 0  | 0              | 2              | 0              | 1              | -0.5           | 60   |
| 0  | 1              | 0.5            | 0              | 0              | 0.25           | 20   |

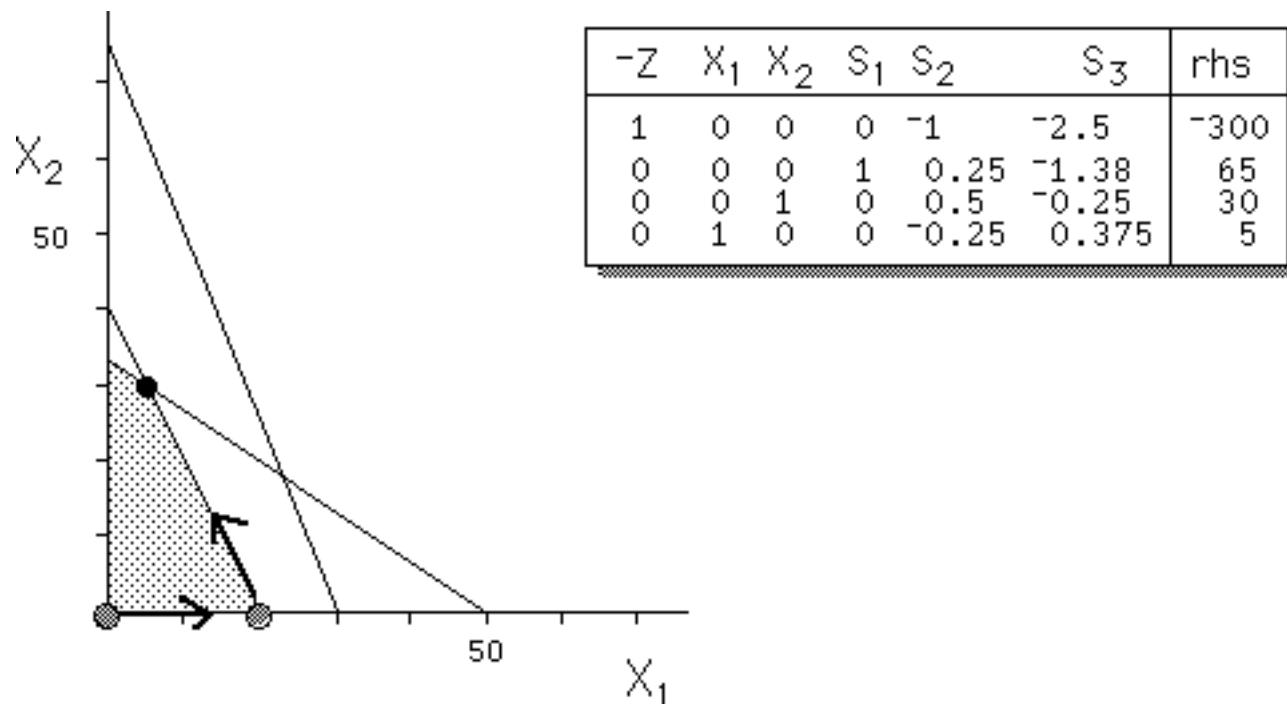

The objective function may be increased further by increasing X<sub>2</sub>.

### Minimum ratio test

$$\text{Min} \left\{ - , \frac{60}{2}, \frac{20}{0.5} \right\}$$

$$= \text{Min} \left\{ -, 30, 40 \right\} = 30$$

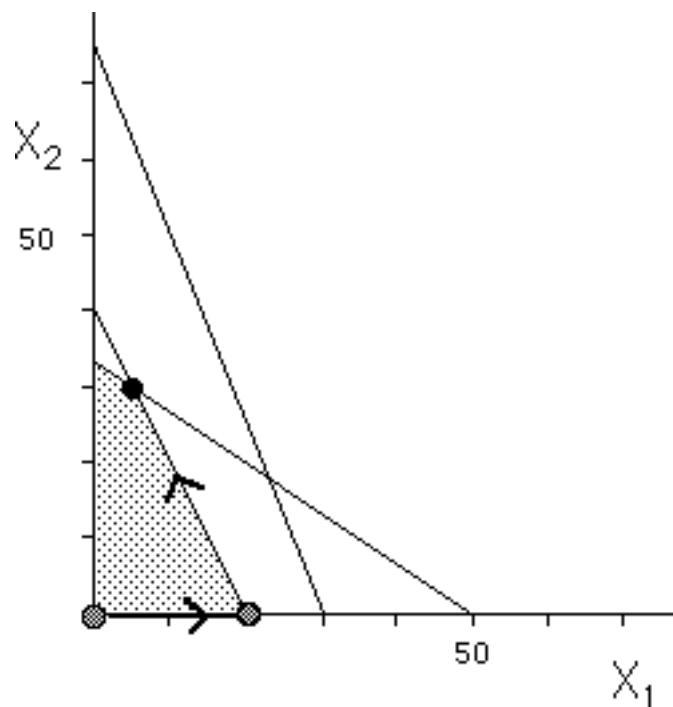

(Only ratios of RHS's to positive substitution rates are used in the minimum ratio test!)

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | S <sub>3</sub> | rhs  |
|----|----------------|----------------|----------------|----------------|----------------|------|
| 1  | 0              | 0              | 0              | -1             | -2.5           | -300 |
| 0  | 0              | 0              | 1              | 0.25           | -1.38          | 65   |
| 0  | 0              | 1              | 0              | 0.5            | -0.25          | 30   |
| 0  | 1              | 0              | 0              | -0.25          | 0.375          | 5    |

Because no variable has a positive relative profit, this basic solution is optimal, i.e.,

$$\begin{cases} Z = 300 \\ S_1 = 65 \\ X_2 = 30 \\ X_1 = 5 \end{cases}$$

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | S <sub>3</sub> | rhs |
|----|----------------|----------------|----------------|----------------|----------------|-----|
| 1  | 12             | 8              | 0              | 0              | 0              | 0   |
| 0  | 5              | 2              | 1              | 0              | 0              | 150 |
| 0  | 2              | 3              | 0              | 1              | 0              | 100 |
| 0  | 4              | 2              | 0              | 0              | 1              | 80  |

*What if you make a mistake in performing the "minimum-ratio test"?*

Suppose, in the first tableau, we had mistakenly chosen to pivot in row 2 (rather than in the correct row, which is row 4).

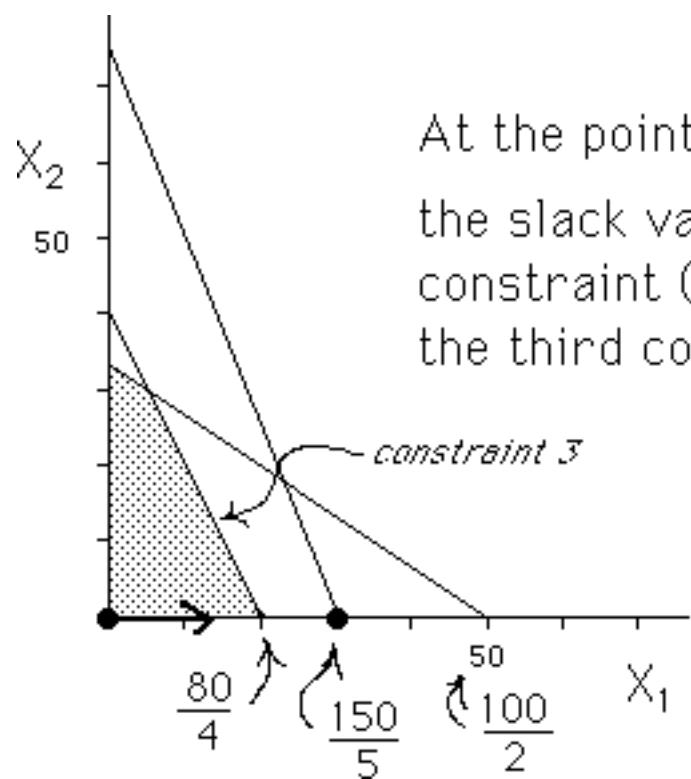

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | S <sub>3</sub> | rhs |
|----|----------------|----------------|----------------|----------------|----------------|-----|
| 1  | 12             | 8              | 0              | 0              | 0              | 0   |
| 0  | 5              | 2              | 1              | 0              | 0              | 150 |
| 0  | 2              | 3              | 0              | 1              | 0              | 100 |
| 0  | 4              | 2              | 0              | 0              | 1              | 80  |

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | S <sub>3</sub> | rhs  |
|----|----------------|----------------|----------------|----------------|----------------|------|
| 1  | 0              | 3.2            | -2.4           | 0              | 0              | -360 |
| 0  | 1              | 0.4            | 0.2            | 0              | 0              | 30   |
| 0  | 0              | 2.2            | -0.4           | 1              | 0              | 40   |
| 0  | 0              | 0.4            | -0.8           | 0              | 1              | -40  |

The result is a tableau with a negative basic variable!

Maximize  $3X_1 + 2X_2$   
 subject to  $6X_1 + 4X_2 \leq 24$   
 $10X_1 + 3X_2 \leq 30$   
 $X_1 \geq 0, X_2 \geq 0$

### Example: Multiple Optima

Maximize  $3X_1 + 2X_2 = Z$   
 subject to  $6X_1 + 4X_2 + S_1 = 24$   
 $10X_1 + 3X_2 + S_2 = 30$   
 $X_1 \geq 0, X_2 \geq 0, S_1 \geq 0, S_2 \geq 0$

Maximize  $3X_1 + 2X_2 = Z$   
 subject to  $6X_1 + 4X_2 + S_1 = 24$   
 $10X_1 + 3X_2 + S_2 = 30$   
 $X_1 \geq 0, X_2 \geq 0, S_1 \geq 0, S_2 \geq 0$

| -Z | $X_1$ | $X_2$ | $S_1$ | $S_2$ | rhs |
|----|-------|-------|-------|-------|-----|
| 1  | 3     | 2     | 0     | 0     | 0   |
| 0  | 6     | 4     | 1     | 0     | 24  |
| 0  | 10    | 3     | 0     | 1     | 30  |

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | rhs |
|----|----------------|----------------|----------------|----------------|-----|
| 1  | 3              | 2              | 0              | 0              | 0   |
| 0  | 6              | 4              | 1              | 0              | 24  |
| 0  | (10)           | 3              | 0              | 1              | 30  |

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | rhs |
|----|----------------|----------------|----------------|----------------|-----|
| 1  | 0              | 1.1            | 0              | -0.3           | -9  |
| 0  | 0              | 2.2            | 1              | -0.6           | 6   |
| 0  | 1              | 0.3            | 0              | 0.1            | 3   |

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | rhs |
|----|----------------|----------------|----------------|----------------|-----|
| 1  | 0              | 1.1            | 0              | -0.3           | -9  |
| 0  | 0              | (2.2)          | 1              | -0.6           | 6   |
| 0  | 1              | 0.3            | 0              | 0.1            | 3   |

| -Z | X <sub>1</sub> | X <sub>2</sub> | S <sub>1</sub> | S <sub>2</sub> | rhs  |
|----|----------------|----------------|----------------|----------------|------|
| 1  | 0              | 0              | -0.5           | 0              | -12  |
| 0  | 0              | 1              | 0.455          | -0.273         | 2.73 |
| 0  | 1              | 0              | -0.136         | 0.182          | 2.18 |

There is no positive relative profit, so this basic solution is optimal.

Note, however, that there is a nonbasic variable ( $S_2$ ) with a zero relative profit.

| $-Z$ | $X_1$ | $X_2$ | $S_1$  | $S_2$  | rhs  |
|------|-------|-------|--------|--------|------|
| 1    | 0     | 0     | -0.5   | 0      | -12  |
| 0    | 0     | 1     | 0.455  | -0.273 | 2.73 |
| 0    | 1     | 0     | -0.136 | 0.182  | 2.18 |

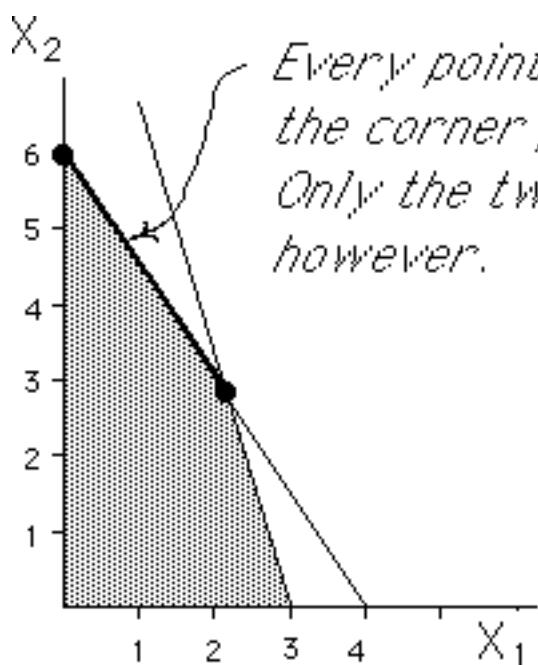

*basic solution*  $\begin{cases} Z = 12 \\ X_2 = 2.73 \\ X_1 = 2.18 \end{cases}$

Both of these basic solutions are optimal!

| $-Z$ | $X_1$ | $X_2$ | $S_1$ | $S_2$ | rhs |
|------|-------|-------|-------|-------|-----|
| 1    | 0     | 0     | -0.5  | 0     | -12 |
| 0    | 1.5   | 1     | 0.25  | 0     | 6   |
| 0    | 5.5   | 0     | -0.75 | 1     | 12  |

*basic solution*  $\begin{cases} Z = 12 \\ X_2 = 6 \\ S_2 = 12 \end{cases}$

Every point on this edge (including the corner points) is optimal.  
Only the two corners are basic, however.

Maximize  $2X_1 + 3X_2$   
 subject to  $X_1 + X_2 \geq 3$   
 $X_1 - 2X_2 \leq 4$   
 $X_1 \geq 0, X_2 \geq 0$

### Example: Unbounded Solution

Maximize  $2X_1 + 3X_2$   
 subject to  $X_1 + X_2 - S_1 = 3$   
 $X_1 - 2X_2 + S_2 = 4$   
 $X_1 \geq 0, X_2 \geq 0, S_1 \geq 0, S_2 \geq 0$

| -Z | $X_1$ | $X_2$ | $S_1$ | $S_2$ | rhs |
|----|-------|-------|-------|-------|-----|
| 1  | -1    | 0     | 3     | 0     | -9  |
| 0  | 1     | 1     | -1    | 0     | 3   |
| 0  | 3     | 0     | -2    | 1     | 10  |

Suppose that, after one or more pivots, we obtain this tableau.

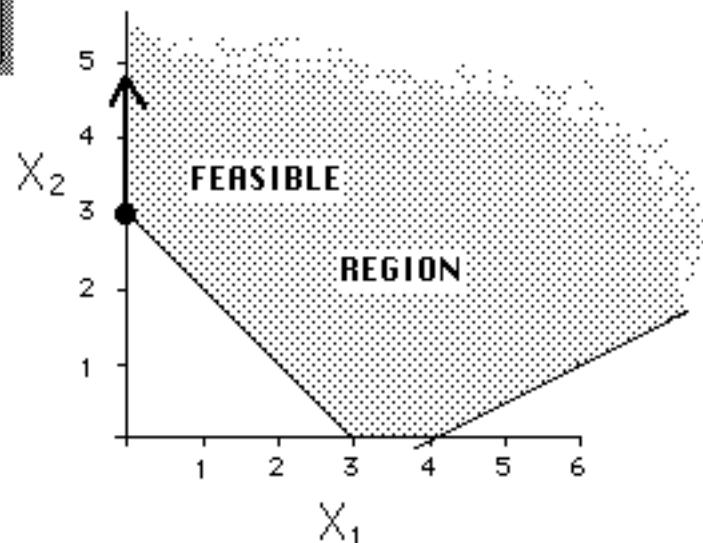

This tableau is not optimal, because  $S_1$  has a positive relative profit.

| $-Z$ | $X_1$ | $X_2$ | $S_1$ | $S_2$ | rhs |
|------|-------|-------|-------|-------|-----|
| 1    | -1    | 0     | 3     | 0     | -9  |
| 0    | 1     | 1     | -1    | 0     | 3   |
| 0    | 3     | 0     | -2    | 1     | 10  |

$S_1$  is selected to enter the basis, but the minimum ratio test provides no "block" on the increase of  $S_1$ .

$$\begin{bmatrix} Z \\ X_2 \\ S_2 \end{bmatrix} = \begin{bmatrix} 9 \\ 3 \\ 10 \end{bmatrix} + \begin{bmatrix} -1 \\ -1 \\ -3 \end{bmatrix} X_1 + \begin{bmatrix} 3 \\ 1 \\ 2 \end{bmatrix} S_1$$

When a pivot column is selected (i.e., a variable is selected for increase) but there is no positive substitution rate on which to pivot, then the solution is unbounded.

If this is a "real-world" problem, this usually means that some error has been made in the formulation or in a previous pivot, since it is impossible to make unlimited profits!

## Example

Maximize  $X_1 + 2X_2 + 3X_3 + 4X_4$   
 subject to

$$\begin{cases} 2X_1 - X_2 + X_3 + 3X_4 \leq 10 \\ X_2 + X_3 - X_4 \leq 12 \\ X_1 + 2X_2 + 5X_3 + 2X_4 \leq 20 \\ 4X_3 - X_4 \leq 10 \end{cases}$$

$$X_j \geq 0, j=1,2,3,4$$

## Initial Tableau

| -Z | $X_1$ | $X_2$ | $X_3$ | $X_4$ | $S_1$ | $S_2$ | $S_3$ | $S_4$ | rhs |
|----|-------|-------|-------|-------|-------|-------|-------|-------|-----|
| 1  | 1     | 2     | 3     | 4     | 0     | 0     | 0     | 0     | 0   |
| 0  | 2     | -1    | 1     | 3     | 1     | 0     | 0     | 0     | 10  |
| 0  | 0     | 1     | 1     | -1    | 0     | 1     | 0     | 0     | 12  |
| 0  | 1     | 2     | 5     | 2     | 0     | 0     | 1     | 0     | 20  |
| 0  | 0     | 0     | 4     | -1    | 0     | 0     | 0     | 1     | 10  |

(max)

| -Z | X <sub>1</sub> | X <sub>2</sub> | X <sub>3</sub> | X <sub>4</sub> | S <sub>1</sub> | S <sub>2</sub> | S <sub>3</sub> | S <sub>4</sub> | rhs   |
|----|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|-------|
| 1  | -1.67          | 3.33           | 1.67           | 0              | -1.33          | 0              | 0              | 0              | -13.3 |
| 0  | 0.667          | -0.333         | 0.333          | 1              | 0.333          | 0              | 0              | 0              | 3.33  |

What if an error is made in selection of the pivot column?

Suppose that, after the first pivot produced the tableau above, we selected the  $X_1$  column for the pivot.
